Currency Wars III: Financial High  
Frontiers Omnia Veritas Limited  
This book will follow the main line of

world reserve currency hegemony, starting with the deliberate overthrow of the pound sterling hegemony by the US dollar, showing how the US monetary strategy masters have gradually eroded the pound sterling power, squeezed the pound sterling's international reserve currency status and trade settlement

pricing power, and how the pound sterling power has counterattacked the US dollar through the "imperial preference system", and returned the US dollar to its original "isolationist" form. The fierce struggle between the dollar and the pound created a vacuum of world financial power in the 1930s that exacerbated the Great Depression worldwide. The Second World War provided a historic opportunity for the dollar to eradicate the pound, and the Atlantic Charter and the Lend-Lease Act were all sharp scalpels in Roosevelt's hands, aimed at dismembering the British Empire's pound. Eventually, the United States established a "Bretton Woods dynasty" with a dollar-based system as regent by "holding gold hostage to the vassals". The basis of

interest in the "China-America" economic marriage is fracturing and disintegrating. America's tolerance for China's booming economy was originally based on the model of Chinese production, American enjoyment, Chinese savings, American consumption. China's future economic transformation will inevitably require a shift in the main resources of the national economy from being tilted towards overseas markets to being tilted towards domestic markets, thereby reducing savings exports to the United States. This process would change the basic U.S. position of continuing to tolerate China's economic growth.

**Currency Wars** Omnia Veritas Limited  
The structure of any human society is a typical pyramidal one, with a critical

minority of people gradually moving up through the social structure due to their own intelligence and diligence, and in some cases through violence and fraud. When they have sufficient financial power and influence, they will in turn consolidate and expand their vested interests by changing the rules of the game and creating a ruling elite with interlocking interests. If the power pyramid structure of Eastern societies is based on regimes, the Western pyramid of domination is a chain of very hidden debts that hold the various strata of society firmly together. In Western societies, creditors have dominant power and debtors are in a dominated position, and the main function of the state apparatus is to protect and reinforce the reliability of this chain. In the West,

whoever is the biggest creditor is the ultimate lawmaker of the game, and central banks, controlled by international bankers since the 19th century, are undoubtedly the biggest creditors of society as a whole, with the rest of society, including governments, being their debtors. From this perspective, the West today is actually a financial powerhouse controlling government decisions. This book will comprehensively describe the formation, development, exclusion, conflict, alliance and checks and balances of the major financial power groups in Europe and the United States over a period of 300 years, systematically analyze the operation and decision-making mechanism of the dominant forces behind the scenes in the world today, and for the first time

unveil the mystery of the "international banking family club" that rules the world. Currency Wars IV Omnia Veritas Limited Vietnamese edition of Song Hong Bing's 'Currency Wars - Who is the richest man in the world', a book that will show readers the intricate working of the world's monetary systems, and how the richest financiers manipulate them in order to control the world's finance and collect huge benefits for themselves... Vietnamese translation by Ho Ngoc Minh.

### **Currency Wars II**

Currency, which has been overlooked by historians, is precisely the key to unlocking many historical puzzles, the compass to discern the maze of today's reality, and the telescope to discover the road to the future. In the course of

studying the financial history of Europe, America, China and Japan, I have a growing feeling that finance is the "fourth dimensional frontier" that a sovereign country must defend. The concept of the frontiers of sovereign states does not only include the three-dimensional physical space constituted by the land, sea and air frontiers (including space), but in the future it needs to include a new dimension: finance. The importance of the financial high frontier will become increasingly important in the coming era of cloudy international currency wars. From the path of financial evolution in Europe and the United States, it can be clearly found that the currency standard, central banks, financial networks, trading markets, financial institutions and

clearing centers together constitute the system architecture of financial high frontier. The main purpose of this system is to ensure efficient and secure resource mobilization for currency pairs. From the source of the central bank to create money, to the customer terminal that eventually accepts money; from the dense network of money flow, to the clearing center of funds remittance; from the trading market of financial instruments, to the rating system of credit assessment; from the soft regulation of the financial legal system, to the construction of rigid financial infrastructure; from the huge financial institutions, to efficient industry associations; from complex financial products, to simple investment instruments, the financial high frontier

protects the monetary blood from the heart of the central bank, to the financial capillaries and even the whole body economic cells, and eventually back to the central bank's circulation system.

Currency Wars I: Currency Warfare

People's ability to think is often paralyzed in the face of overwhelming information and a myriad of opinions. Critical data is drowned out by noise data, important details are confused by minutiae, deeper pathologies are confused by superficial pathologies, core reasoning is tied up in trivial logic, analysis loses its bearings and judgment goes astray. Ultimately, the illusion displaces the truth. This is particularly true in the economic sphere. Five years after the end of the financial crisis in 2008, views on the future course of the

world economy are still divided. Has the U.S. quantitative easing been effective or not? Is the global currency overshoot a blessing or a curse? Are financial markets becoming safer, or more dangerous? Has the economic recovery been steady or short-lived? In short, is the world gradually moving away from the last recession, or is it accelerating its slide to the next crisis? All the activities that mankind has ever engaged in have always revolved around two most basic tasks, one of which is the creation of wealth and the other is the distribution of wealth, from which all other activities are derived. Whether creating wealth or distributing it, human greed has been the source of their ultimate energy since the beginning. The "good in greed" drives technological advances that save

energy, reduce time, reduce intensity, and increase pleasure, resulting in a continuous increase in productivity and more prosperous wealth creation. However, the insatiable greed of greed can inspire trickery, speculation, fraud, quick gains and extravagance, which in turn stifle productivity progress, lead to a distorted distribution of wealth and reduce the economic vitality of society. Currency Wars V: The Coming Rain Money, by its very nature, is a claim to wealth, and people hold money, the equivalent of a receipt for holding wealth. What is wealth? What form of wealth is used to issue money as collateral determines the nature of the currency. The most widely accepted form of wealth is currency. Wealth, but also currency, is the fruit of human

labour. The commodity property of the commons is, in essence, the property of labour. Over the 5,000 years of human civilization, more than 2,000 commodities have taken on the role of currency, and the market has evolved to phase out other currencies, eventually choosing gold and silver as the ultimate representatives of wealth. No matter what region, no matter what civilization, no matter what religion, gold and silver formed the currency as the most widely accepted form of wealth. The gold and silver at this time is both the claim to wealth and the wealth itself. Even though people have gradually forgotten the gold behind the paper money receipts in the long process of being brainwashed, gold, after all, restricts the

over-issuance of receipts, because when there are too many receipts, sooner or later people will be interested in the gold that these receipts can claim. Bankers, as the rule makers of the money game, did not like gold as collateral for paper money, either because it was not enough to satisfy the inflation of paper money desires, or because it did not generate interest income. The idea that bankers would prefer to replace gold with an asset that would never run out and would be viable is a tempting one, and after 1971, the demonetization of gold was in fact an unequal treaty unilaterally imposed on others by the rule-makers of the money game. Thus, we were introduced to an entirely new form of money: sovereign credit money.
