Scores of talented and dedicated people serve the forensic science community, performing vitally important work.

However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity,

the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Now a Netflix film starring and directed
by Chiwetel Ejiofor, this is a gripping
memoir of survival and perseverance
about the heroic young inventor who
brought electricity to his Malawian
village. When a terrible drought struck
William Kamkwamba's tiny village in
Malawi, his family lost all of the season's
crops, leaving them with nothing to eat
and nothing to sell. William began to
explore science books in his village
library, looking for a solution. There, he
came up with the idea that would
change his family's life forever: he could
build a windmill. Made out of scrap metal
and old bicycle parts, William's windmill
brought electricity to his home and

helped his family pump the water they
needed to farm the land. Retold for a
younger audience, this exciting memoir
shows how, even in a desperate
situation, one boy's brilliant idea can
light up the world. Complete with
photographs, illustrations, and an
epilogue that will bring readers up to
date on William's story, this is the
perfect edition to read and share with
the whole family.

This is a print on demand edition of a
hard to find publication. Explores
whether sufficient data exists to
examine the temporal and spatial
relationships that existed in terrorist
group planning, and if so, could patterns
of preparatory conduct be identified?
About one-half of the terrorists resided,
planned, and prepared for terrorism
relatively close to their eventual target.
The terrorist groups existed for 1,205
days from the first planning meeting to
the date of the actual/planned terrorist
incident. The planning process for
specific acts began 2-3 months prior to
the terrorist incident. This study
examined selected terrorist
groups/incidents in the U.S. from
1980-2002. It provides for the potential
to identify patterns of conduct that
might lead to intervention prior to the
commission of the actual terrorist
incidents. Illustrations.
