La Domotica, nata per migliorare il comfort di vita nei nostri alloggi, può diventare uno strumento potente per ridurre in modo significativo i consumi di energia. Il volume, diviso in cinque parti, illustra l'evoluzione, i vantaggi, le prospettive e le applicazioni caratteristiche di un sistema domotico, con approfondimenti

sull'integrazione degli impianti elettrici, di sicurezza antintrusione e ambientale, di climatizzazione e i sistemi multi energia. Una parte rilevante del testo è dedicata alla progettazione e alle fasi di realizzazione di appartamenti e ville con analisi dell'incidenza dei risparmi sui consumi per riscaldamento, illuminazione, nella gestione dell'integrazione edificio-impianti, a partire dagli studi dell'ENEA presso il centro di ricerca della Casaccia. La parte quarta è dedicata alla normativa sull'efficienza energetica: Norme UNI-EN 15232 e CEI 205-18, con esempi di calcolo

sui risparmi ottenibile con l'uso di sistemi di automazione. Nella parte quinta è riportata un'interessante indagine sull'efficienza energetica delle abitazioni italiane realizzata nel 2012. Il volume si rivolge pertanto a progettisti e installatori d'impianti, a uffici tecnici d'impresе di costruzioni, a fornitori di tecnologie, a laureandi in architettura e ingegneria, a studenti di istituti tecnici e professionali e a tutti coloro che attraverso l'utilizzo delle potenzialità di un sistema domotico possono gestire l'integrazione degli impianti presenti in un appartamento per

migliorare il confort e ridurre i consumi finali di energia. Giuseppe Gustavo Quaranta, Ingegnere libero professionista, progettista di impianti elettrici e domotici. Componente del Sottocomitato Tecnico 64-D del CEI "Interpretazione normativa". È stato componente del Comitato Tecnico CT-205 del CEI "Sistemi elettronici per la casa e l'edificio". Art of War: The Articles of Sun Tzu

Bloomsbury Publishing

The final bankruptcy of the great socialist experiment in Eastern Europe appeared to sound a death knell for utopian thought. In 'Thinking Utopia' an effort is made to rehabilitate the concept of political utopia, arguing that utopian ideas continue to be relevant in the modern world.

Thinking Utopia Routledge

Lighting design, long regarded as a pragmatic and purely technical aspect of construction planning, has increasingly developed into a discipline of its own over the past years. This publication recognises recent developments by combining the technical sphere with an artistic perspective, centred on the question of the role of natural and artificial light in the perception of a variety of (urban) landscapes. The first section of the book describes techniques for creating nocturnal landscapes, analysing these according to typology (coastal, riverside, lakeside, mountain, forest, marsh, or quarry and industrial sceneries) and concept of illumination. We embark on a process of learning to read (illuminated) landscapes. The second section presents detailed documentation of 21 international case-studies arranged according to type

and drawn, for example, from Great Britain, Germany, France, the Netherlands, Japan and Singapore.

The first part of this book is of an epistemological nature and develops an original theory of scientific objectivity, understood in a weak sense (as intersubjective agreement among the specialists) and a strong sense (as having precise concrete referents). In both cases it relies upon the adoption of operational criteria designed within the particular perspective under which any single science considers reality. The "object" so attained has a proper ontological status, dependent on the specific character of the criteria of reference (regional ontologies). This justifies a form of scientific realism. Such perspectives are also the result of a complex cultural-historical situation. The awareness of such a "historical determinacy" of science justifies including in the philosophy of science the problems of ethics of science, relations of science with metaphysics and social dimensions of science that overstep the traditional restriction of the philosophy of science to an epistemology of science. It is to this

“context” that the second part of the book is devoted.

"This book illustrates some of the most spectacular results achieved by the world's foremost professionals in the field of light engineering. With photographs of prominent projects ranging from the nocturnal grandeur of Ca Vendramin-Calergi on Venice's Grand Canal, to the haunting memorial recreation of the two towers of the World Trade Center using banks of floodlights, this volume illuminates the ways that light engineering is used to bring beauty to the seemingly mundane."

Voyage into the Unknown Routledge

Written in 500 BC, The Art of War, by Sun Tzu, is the foremost war strategy manuscript. This book will teach you when to battle, when not to battle, how to battle, how not to battle, and how to win every time you battle. Further key notions presented are: how to maintain an army, how to carry through a battle plan, how to

gather intelligence, how to allocate resources, how to maintain high morale, how to weaken the enemy, how to deceive the opponent, and how to survive a battle. Several prevalent strategies shared by Sun Tzu are: - Battle if you are to win. - Let your plans be dark as night, and when you move, fall as a thunderbolt. - Appear weak when strong, and strong when weak. - Successful warriors win first and then war. Defeated soldiers war first and then seek to win. - All conflict is deception. - Move swift as wind and solid as wood. Attack like fire and remain motionless as a mountain. - Those who desire to battle must first consider the cost. The Art of War can be divided into three sections and the first two chapters, plus the last chapter, explore strategies of positional awareness. The second section highlights methods to expand. And the third section explores strategies to respond offensively and defensively. In the end, the strategies of Sun Tzu are basically an offensive-defensive order-maneuver before fighting, commit not until the opponent has revealed his hand, then deceive the enemy by engaging or attracting with one force while striking with another

contingent. The Art of War is a valuable read for every war strategist and it is categorized under 13 headings. Use this knowledge wisely. - PRELIMINARY RECKONING - OPERATIONS OF WAR - THE ATTACK BY STRATAGEM - THE ORDER OF BATTLE - THE SPIRIT OF THE TROOPS - EMPTINESS AND STRENGTH - BATTLE TACTICS - THE NINE CHANGES - MOVEMENT OF TROOPS - GROUND - NINE GROUNDS - ASSAULT BY FIRE - THE EMPLOYMENT OF SPIES

This book explores how lighting systems based on LED sources have the ability to positively influence the human circadian system, with benefits for health and well-being. The opening chapters examine the functioning of the human circadian system, its response to artificial lighting, potential health impacts of different types of light exposure, and current researches in circadian photometry. A first case study analyzes the natural lighting available in an urban interior, concluding that it is unable to activate the human circadian system over the entire year. Important original research is then described in which systems suitable for artificial

circadian lighting in residential interiors and offices were developed after testing of new design paradigms based on LED sources. Readers will also find a detailed analysis of the LED products available or under development globally that may contribute to optimal artificial circadian lighting, as well as the environmental sensors, control interfaces, and monitoring systems suitable for integration with new LED lighting systems. Finally, guidelines for circadian lighting design are proposed, with identification of key requirements.

 In the summer of 1803, Thomas Jefferson sent Meriwether Lewis and William Clark on a journey to establish an American presence in a land of unqualified natural resources and riches. Is it fitting that, on the 200th anniversary of that expedition, the United States, together with international partners, should embark on another journey of exploration in a vastly more extensive region of remarkable potential for discovery. Although the oceans cover more than 70 percent of our planet's surface, much of the ocean

has been investigated in only a cursory sense, and many areas have not been investigated at all. Exploration of the Seas assesses the feasibility and potential value of implementing a major, coordinated, international program of ocean exploration and discovery. The study committee surveys national and international ocean programs and strategies for cooperation between governments, institutions, and ocean scientists and explorers, identifying strengths, weaknesses, and gaps in these activities. Based primarily on existing documents, the committee summarizes priority areas for ocean research and exploration and examines existing plans for advancing ocean exploration and knowledge.

Learning in the Museum examines major issues and shows how research in visitor studies and the philosophy of education can be applied to facilitate a meaningful educational experience in museums. Hein

combines a brief history of education in public museums, with a rigorous examination of how the educational theories of Dewey, Piaget, Vygotsky and subsequent theorists relate to learning in the museum. Surveying a wide range of research methods employed in visitor studies is illustrated with examples taken from museums around the world, Hein explores how visitors can best learn from exhibitions which are physically, socially, and intellectually accessible to every single visitor. He shows how museums can adapt to create this kind of environment, to provide what he calls the 'constructivist museum'. Providing essential theoretical analysis for students, this volume also serves as a practical guide for all museum professionals on how to adapt their museums to maximize the educational experience of every visitor.

With its depiction of the victorious English king, Henry V has divided critical opinion and remains one of the more controversial of Shakespeare's histories. This new volume in Shakespeare: The Critical

Tradition increases our knowledge of how Shakespeare's plays were received and understood by critics, editors and general readers. The volume offers, in separate sections, both critical opinions about the play across the centuries and an evaluation of their positions within and their impact on the reception of the play. The chronological arrangement of the text-excerpts engages the readers in a direct and unbiased dialogue, whereas the introduction offers a critical evaluation from a current stance, including modern theories and methods. Thus the volume makes a major contribution to our understanding of the play and of the traditions of Shakespearean criticism surrounding it as they have developed from century to century.

First published in 1934, Preface to Action was written to provoke thought on society and its structure and to enable readers to make a considered judgement at election, particularly those with less time to make

their decision. The book discusses the conflict between wanting to make an informed political decision, and not having the time or all the information to do so. In light of this, Catlin brings together what he considers useful points to help guide readers towards a decision. He outlines his personal opinions and explains his reasons for them. Divided into three parts, the book first explores psychology and considers what institutional forms would best satisfy what he identifies as the major human instincts or impulses. The second part considers the community, whether it is state or nation, and what the best form of it is. The third part is a detailed exploration of the religions of Catholicism, Toryism, Fascism, and Communism. Preface to Action will be of great appeal to those with an interest in twentieth century British and European history, the history of politics, the history of political thought, and political psychology.
