Christmas Trees Words & Pictures
National Bestseller Winner of the National Book Critics Circle Award for Autobiography A New York Times Notable Book Geobiologist Hope Jahren has spent her life studying trees, flowers, seeds, and soil. Lab Girl is her revelatory treatise on plant life—but it is also a celebration of the lifelong

curiosity, humility, and passion that drive every scientist. In these pages, Hope takes us back to her Minnesota childhood, where she spent hours in unfettered play in her father's college laboratory. She tells us how she found a sanctuary in science, learning to perform lab work "with both the heart and the hands." She introduces us to Bill, her brilliant, eccentric lab manager. And she extends the mantle of scientist to each one of her readers, inviting us to join her in observing and protecting our environment. Warm, luminous, compulsively readable, Lab Girl vividly demonstrates the mountains that we can move when love and work come together. Trees come in a wide array of leaf
 shapes, sizes, flower arrangements,
 growth habits, and so on, but one of the
 most striking and sought after features
 is the blue to bluish-gray foliage of the
 Colorado Blue Spruce. For quite a long
 time, the most popularly planted
 evergreen is the Blue. If they were faster
 growing, more readily available, and
 reasonably priced, they might well be
 the most widely planted tree (of all
 types) nationwide. The Blue Spruce is a
 nice tree for the home and landscape
 design, versatile in usage, and hardy of a
 wide range of growing conditions.

In gentle rhyme, *It Starts with a Seed* evocatively explores the growth of a tiny sycamore seed. Taking a journey through the seasons and years, we follow the seed as it transforms from a seedling to a sapling, then a young tree, until it becomes a large tree with its branches and roots filling the page. As the tree grows, it is joined by well-loved woodland creatures - squirrels and rabbits, butterflies and owls - who make it their home. Beautiful and evocative, *It Starts with a Seed* is a factual story that will touch children with its simple but enchanting message of life and growth. Beautifully presented, *It Starts with a Seed* has a gold embossed front cover, gatefolds, textured paper and specialised etching technique, hand made by the illustrator throughout. It

Starts with a Seed was the winner of the inaugural Margaret Mallett Award for Children's Non-Fiction.

Growing Trees from Seed Independently Published

A squirrel buries an acorn. A dolphin pushes a coconut into an ocean current. A camel chewing a date spits out the seed. What do they all have in common? Each one, in its own way, has helped to plant a tree. In myriad ways and diverse

environments, Mother Nature is given a hand in dispersing seeds that eventually grow into trees. From the apple seeds falling off the sticky fur of a black bear to the pine seed carried by an army of ants marching to their anthill, creatures great and creatures small participate in nature's cyclical dance in the planting of a tree. Jerry Pallotta, author of more than 50 children's books, visits at least 150 schools each year. His book, *The Icky Bug Alphabet Book*, has sold more than one million copies. He is a contributor in Jon Scieszka's book, *Guys Write for Guys Read*. He lives in Needham, Massachusetts. Tom Leonard's children's book art combines a folk-art sophistication with a scientifically realistic interpretation. He was the illustrator for a collection of Margaret

Wise Brown's previously unpublished poetry, *Under the Sun and the Moon*, winning praise in *School Library Journal* and *Publisher's Weekly*. He lives in Philadelphia, Pennsylvania.

With Native Trees, Shrubs, and Vines, acclaimed horticulturalist and bestselling author William Cullina continues his authoritative three-part series on the native species of North America. This user-friendly guide encourages the concept of ecological gardening by working with strictly native flora, and

presents a trove of helpful information with lively, easily accessible prose. This encyclopedic guide to temperate North American woody plants covers nearly one thousand native varieties, arranged alphabetically by genus and species. Writing with enjoyable, easy-to-read language and drawing from a deep wellspring of personal experience, Cullina discusses all of the important details you need to select and cultivate each species, including their taxonomic and genetic data, Latin name pronunciations, optimal geographic ranges, soil needs, light and habitat requirements, information about pruning and diseases, and propagation difficulty ratings. It also notes the value of each species for attracting wildlife and highlights the threat of invasive species.

Native Trees, Shrubs, and Vines is also beautifully illustrated with over 400 color photographs of each genus, and includes recommendations detailing conditions under which various species thrive. Cullina is also passionate about environmentally-responsible native plant landscaping and gives valuable advice with the larger environment in mind. This book is an indispensable resource for any landscape designer or home gardener's library.
