Autoimmune Diseases.

An autoimmune disease is when your immune system identifies your own body cells as 'foreign' and therefore potentially harmful.

This results in your white blood cells will attack your own body cells. Arthritis is an autoimmune disease in which the immune system attacks the cartilage in joints.

*The immune system of the human body in defence against disease*

The immune system is

spread throughout the body and involves many types of cells, organs, proteins, and tissues. Crucially, it can distinguish our tissue from foreign tissue — self from non-self.

Communicable diseases Pathogens are disease-causing viruses, bacteria, fungi or protists, which can infect animals and plants. Humans have an immune system, which can defend them from pathogens.
