Adventures of 2 Girls traces the journey of two best friends who take a 9-month break from their successful careers to tick a big, fat item off their Bucket Lists: To travel the world and write a book. Ning is an award-winning professional female magician, and Pam an award-winning journalist and radio DJ. At the peak of their careers, they break loose from the safe and familiar, stuff their backpacks with bare essentials, and buy two one-way tickets to Honolulu. From a road trip across the United States, to spending a summer in Paris, studying French and being certified in the art of patisserie at the prestigious Le Cordon Bleu, from roughing it out in wild Madagascar (with no electricity, running water or toilets!), to trekking in the Himalayas, Pam and Ning go in search of new experiences and ultimate adventures off the beaten track. If you think this is a guidebook for girls, or an offshoot of Eat, Pray, Love... think again! Adventures of 2 Girls boasts action-packed

accounts of sticky situations faced by two city girls in foreign lands, travel tips about budgeting, finances, insurance, PMS survival etc., plus quirky observations, and quiet ruminations on lazy afternoons... complete with private photos from their compact cameras and iPhones, and sketches from their travel journals. It's a heart-warming, humorous and inspiring story about friendship, chasing dreams, taking risks, and letting go.

The automobile is an icon of modern technology because it includes most aspects of modern engineering, and it offers an exciting approach to engineering education. Of course there are many existing books on introductory fluid/aero dynamics but the majority of these are too long, focussed on aerospace and don't adequately cover the basics. Therefore, there is room and a need for a concise, introductory textbook in this area. Automotive Aerodynamics fulfils this need and is an introductory textbook intended as a first course in the complex field of aero/fluid mechanics for engineering students. It introduces basic concepts and fluid properties, and covers fluid dynamic equations. Examples of automotive aerodynamics are included and the principles of computational fluid dynamics are introduced. This text also includes topics such as aeroacoustics and heat transfer which are important to engineering students and are closely related to the main topic of aero/fluid mechanics. This textbook contains complex mathematics, which not only serve as the foundation for future studies but also provide a road map for the present text. As the chapters evolve, focus is placed on more applicable examples, which can be solved in class using elementary algebra. The approach taken is designed to make the mathematics more approachable and easier to understand. Key features: Concise textbook which provides an introduction to fluid mechanics and aerodynamics, with automotive applications Written by a leading author in the field who has experience working with motor sports teams in industry Explains basic concepts and equations before progressing to cover more advanced topics Covers internal and external flows for automotive applications Covers emerging areas of aeroacoustics and heat transfer Automotive Aerodynamics is a must-have textbook for undergraduate and graduate students in automotive and mechanical engineering, and is also a concise reference for engineers in industry.

This book is based on the behavioural intention of public transport passengers and the relationship between those factors in Indonesia. The conceptual model in this book explains behavioural

intentions of paratransit passengers which can result in recommendations to unravel the complexity of the congestion problem from consumer behaviour perspective. Based on the results of survey research on behavioural intention of public transport users in Jabodetabek, Indonesia, the result of the study is presented in a model that describes the factors that influence. This book is recommended for academics who wish to gain knowledge about the phenomenon of consumer behaviour, for regulators whose duty is to make a decision and determine the strategic steps to overcome congestion and researchers who want to develop their knowledge and provide solutions related to congestion from the perspective of consumer behaviour.

Mai come nell'ultimo periodo il mercato delle quattro e delle due ruote è stato tanto in fermento da determinare una vera e propria metamorfosi delle reti distributive. Calo vertiginoso della domanda, inasprimento della concorrenza, aumento degli standard quantitativi e qualitativi richiesti dalle Case produttrici, maggiore ricorso a fonti di finanziamento esterne, diminuzione della redditività, sono solo alcuni dei tanti nuovi mostri sperimentati da chi vende e ripara auto e moto. Questa evoluzione rende necessaria la conoscenza di tecniche di gestione tipiche di un settore in cui la passione non può più pilotare il destino delle aziende. Questo primo manuale di Dealership Management italiano, dedicato al settore automotive, spiega a fondo tutti gli aspetti del mercato e dell'organizzazione aziendale. Attraverso esempi concreti e dalla viva voce dei top manager delle più importanti Case italiane di auto e moto, offre importanti soluzioni a molti dei problemi emersi negli ultimi anni e le mosse per anticipare la ripresa. La prefazione del libro è un'intervista a Giuseppe Volpato (professore ordinario di Economia e gestione delle imprese presso l'Università Ca' Foscari di Venezia, membro dello Steering Committee del Groupe d'Étude et Recherche Permanent dans l'Industrie et les Salariés de l'Automobile di Parigi e Senior Adviser dell'International Car Distribution Programme di Birmingham), che ci aiuta a decifrare con rigore scientifico l'evoluzione in atto nel business model della distribuzione automotive.
