Every surgical subspecialty has been rapidly developing with establishment of the board certification. The Division of Endocrine Surgery (DES) of the European Board of Surgery has defined the curriculum for Endocrine Surgery to include thyroid, parathyroid, adrenal and GEP-NET surgery, and handles accreditation in Endocrine Surgery. The first examinations in Endocrine Surgery in Europe have been introduced in 2003. The main goal of the exam is to maintain a uniform and high standard of endocrine surgical professionalism across the Europe. This book was completed with the expectation that it would benefit all European surgeons looking to be certified in Endocrine Surgery. Additionally, surgeons from the United States and other non-EU countries we hope will also benefit from this book. There is a need for a specialized book that reviews evidence based endocrine surgery

that aligns itself with current curriculum standards in the field. The book contains knowledge that is expected to be known on the board examination of the DES. In general, chapters start with a patient's case followed by questions. The subsequent comprehensive yet concise main text provides all the information needed for a successful DES exam and cites important references. After the patient case and questions, the text goes on to define the condition, the standard of care approach to establish the diagnosis, perform diagnostic tests of choice, review evidence-based treatment options including medical therapy, preparation for surgery. The chapters conclude with follow up care and long term outcomes. The topics discussed within this book closely follow the curriculum of the European Board of Surgery Examination. Written by experts in the field, Endocrine Surgery Comprehensive Board Exam Guide is a valuable source of preparation for the Endocrine Surgery examination and brings Endocrine Surgery to a higher level of expertise by helping to raise the standard of training for future endocrine surgeons.

Higher education is a strange beast. Teaching is a critical skill for scientists in academia, yet one that is barely touched upon in their professional training—despite being a substantial part of their career. This book is a practical guide for anyone teaching STEM-related academic disciplines at the college level, from graduate students teaching lab sections and newly appointed faculty to well-seasoned professors in want of fresh ideas. Terry McGlynn's straightforward, no-nonsense approach avoids off-putting pedagogical jargon and enables instructors to become true ambassadors for science. For years, McGlynn has been addressing the need for practical and accessible advice for college science teachers through his popular blog Small Pond Science. Now he has gathered this advice as an easy read—one that can be ingested and put to use on short deadline. Readers will learn about topics ranging from creating a syllabus and developing grading rubrics to mastering learning management systems and ensuring safety during lab and fieldwork. The book also offers advice on cultivating productive relationships with students, teaching assistants, and colleagues.

"The main thrust of this book is to deliver a major critique of materialist and rationalist explanations of social and cultural forms, but the in the process Sahlins has given us a much stronger statement of the centrality of symbols in human affairs than have many of our 'practicing' symbolic anthropologists. He demonstrates that symbols enter all phases of social life: those which we tend to regard as strictly pragmatic, or based on concerns with material need or advantage, as well as those which we tend to view as purely symbolic, such as ideology, ritual, myth, moral codes, and the like. . . ."—Robert McKinley, *Reviews in Anthropology*

A novel investigation of pro bono marketing and the relationship between goods, exploring the complex moral dimensions of philanthropic advertising. The advertising industry may seem like one of the most craven manifestations of capitalism, turning consumption into a virtue. In *Tangled Goods*, authors Iddo Tavory, Sonia Prelat, and Shelly Ronen consider an important dimension of the advertising industry that appears to depart from the industry's consumerist foundations: pro bono ad campaigns. Why is an industry known for biting cynicism and cutthroat competition also an industry in which people dedicate time and effort to "doing good"? Interviewing over seventy advertising professionals and managers, the authors trace the complicated meanings of the good in these pro bono projects. Doing something altruistic, they show, often helps employees feel more at ease working for big pharma or corporate banks. Often these projects afford them greater creative leeway than they normally have, as well as the potential for greater recognition. While the authors uncover different motivations behind pro bono work, they are more interested in considering how various notions of the good shift, with different motivations and benefits rising to the surface at different moments. This book sheds new light on how goodness and prestige interact with personal and altruistic motivations to produce value for individuals and institutions and produces a novel theory of the relationship among goods: one of the most fraught questions in sociological theory.

Digital tools have long been a transformative part of academia, enhancing the classroom and changing the way we teach. Yet there is a way that academia may be able to benefit more from the digital revolution: by adopting the project management techniques used by software developers. Agile work strategies are a staple of the software development world, developed out of the need to be flexible and responsive to fast-paced change at times when "business as usual" could not work. These techniques call for breaking projects into phases and short-term goals, managing assignments collectively, and tracking progress openly. Agile Faculty is a comprehensive roadmap for scholars who want to incorporate Agile practices into all

aspects of their academic careers, be it research, service, or teaching. Rebecca Pope-Ruark covers the basic principles of Scrum, one of the most widely used models, and then through individual chapters shows how to apply that framework to everything from individual research to running

faculty committees to overseeing student class work. Practical and forward-thinking, Agile Faculty will help readers not only manage their time and projects but also foster productivity, balance, and personal and professional growth.
