All across the United States, individuals, families, communities, and health care systems are struggling to cope with substance use, misuse, and substance use disorders. Substance misuse and substance use disorders have devastating effects, disrupt the future plans of too many young people, and all too often, end lives prematurely and tragically. Substance misuse is a major public health challenge and a priority for our nation to address. The effects of substance use are cumulative and costly for our

society, placing burdens on workplaces, the health care system, families, states, and communities. The Report discusses opportunities to bring substance use disorder treatment and mainstream health care systems into alignment so that they can address a person's overall health, rather than a substance misuse or a physical health condition alone or in isolation. It also provides suggestions and recommendations for action that everyone--individuals, families, community leaders, law enforcement, health care professionals, policymakers, and researchers--can take to prevent substance misuse and reduce its consequences.

Drug abuse has become very common among students in the university and schools. Drugs are being misused by students within the university for various reasons. The most common reason being stress. To cope with the competition and ever increasing work load of the program students resort to taking drugs either to relieve stress or to stay awake all night to study. Another reason for taking drugs is peer pressure, the pressure to fit in and try something new. Drugs have become fashionable, are easily available and students take it because they feel it is "normal", just like having an alcoholic drink in a social gathering. They usually start with a mild drug and then move on to harder ones like cocaine and heroin. The unfortunate part in Indian universities is the lack of support system for the students. There is no focus on creating a positive environment for the students to relieve their stress and discuss their problems. Drugs are like a disease taking over our society with no end. I am deeply concerned with this situation. I am indebted to be invited to become volunteer assistant for such an important project. We will do whatever we can to assist in this project so that it can bring resolution to this epidemic in our society.
