Andrew Pollard and Martin Maiden have assembled an impressive collection of the latest molecular and cellular techniques for the development, evaluation, and implementation of vaccines to be used against this dreaded disease. The contributors-leading scientists, clinicians, and public health physicians-describe in detail the many approaches to vaccine design, as well as the assessment of immune response to vaccine candidates and novel vaccine formulations. Timely and comprehensive, *Meningococcal Vaccines: Methods and Protocols* provides the scientist, public health physician, epidemiologist, clinical microbiologist, and clinician with the essential tools to lay bare the secrets of the meningococcus, and to develop, evaluate, and implement successful new meningococcal vaccines.

Constitutional Dynamic Chemistry BoD - Books on Demand
Based on an international workshop held in St. Petersburg, Russia, this volume examines public health issues related to infant and child nutrition in developing, transitional, and

industrialized countries. Chapters discuss the interaction between malnutrition and infectious diseases and the consequences and prevention of micronutrient deficiencies. Full consideration is given to interventions for promoting breast feeding and strategies for reducing HIV transmission through breast feeding. The contributors review various programs for improving complementary feeding and methods for preventing microbial contamination of complementary foods. Also included are discussions on the role of infant nutrition in preventing adult health problems such as obesity.

This review is intended primarily for health professionals and others concerned with nutrition, health and well-being of children. The objective is to provide the background information that is necessary for the development of scientifically sound feeding recommendations and appropriate intervention programmes to enhance children's dietary intake and nutritional status. Although much of the information may be relevant for young children in industrialized countries, the review focuses on the particular needs of children in low-income settings, and the recommendations have been formulated with consideration for the economic and environmental constraints that are common in

developing countries. [Author] The review is organized in nine sections : 1. Introduction. - 2. Breast-feeding and complementary feeding : a continuum. - 3. Energy required from complementary foods and factors affecting their intake. - 4. Protein and micronutrients required from complementary foods. - 5. Caregiver feeding behaviours. - 6. Food processing safety and quality. - 7. Global data on child-feeding practices. - 8. Programmatic interventions to improve complementary feeding. - 9. Conclusions

This volume presents a state-of-the-science review of the most promising current European research -- and its historic roots of research -- on complex problem solving (CPS) in Europe. It is an attempt to close the knowledge gap among American scholars regarding the European approach to understanding CPS.

Although most of the American researchers are well aware of the fact that CPS has been a very active research area in Europe for quite some time, they do not know any specifics about even the most important research. Part of the reason for this lack of knowledge is undoubtedly the fact that European researchers -- for the most part -- have been rather reluctant to publish their work in English-language journals. The book concentrates on European research because the basic approach European scholars have taken to studying CPS is very different from one taken by North American researchers. Traditionally, American scholars have been studying CPS in "natural" domains -- physics, reading, writing, and chess playing -- concentrating primarily on exploring novice-expert differences and the acquisition of a complex skill. European scholars, in contrast, have been primarily

concerned with problem solving behavior in artificially generated, mostly computerized, complex systems. While the American approach has the advantage of high external validity, the European approach has the advantage of system variables that can be systematically manipulated to reveal the effects of system parameters on CPS behavior. The two approaches are thus best viewed as complementing each other. This volume contains contributions from four European countries -- Sweden, Switzerland, Great Britain, and Germany. As such, it accurately represents the bulk of empirical research on CPS which has been conducted in Europe. An international cooperation started two years ago with the goal of bringing the European research on complex problem solving to the awareness of American scholars. A direct result of that effort, the contributions to this book are both informative and comprehensive.

Despite more than 50 years' experience with outcome measurement in musculoskeletal clinical trials, there is little conformity in the methods used, and no standard text on clinical metrology exists. This new book reviews the methods used to assess the clinical efficacy of antirheumatic drugs in adult patients with musculoskeletal disease, focusing primarily on clinical rather than laboratory or radiographic measures. There are four parts: overviews of fundamental issues in clinical metrology; of outcome measures relevant to antirheumatic drugs; a review of current clinimetric practices in rheumatoid arthritis, osteoarthritis, ankylosing spondylitis and fibromyalgia clinical trials; and a discussion of different measurement

techniques. The text is complemented by many illustrations and three appendices. The book is a highly informative text which will be of interest to all involved in evaluating treatment strategies for musculoskeletal patients, as well as those involved in the development and regulation of antirheumatic drugs.

Neuropsychology as a field has been slow to embrace and exploit the potential offered by technology to either make the assessment process more efficient or to develop new capabilities that augment the assessment of cognition. The Role of Technology in Clinical Neuropsychology details current efforts to use technology to enhance cognitive assessment with an emphasis on developing expanded capabilities for clinical assessment. The first sections of the book provide an overview of current approaches to computerized assessment along with newer technologies to assess behavior. The next series of chapters explores the use of novel technologies and approaches in cognitive assessment as they relate to developments in telemedicine, mobile health, and remote monitoring including developing smart environments. While still largely office-based, health care is increasingly moving out of the office with an increased emphasis on connecting patients with providers, and providers with other providers, remotely. Chapters also address the use of technology to enhance cognitive rehabilitation by implementing conceptually-based games to teach cognitive

strategies and virtual environments to measure outcomes. Next, the chapters explore the use of virtual reality and scenario-based assessment to capture critical aspects of performance not assessed by traditional means and the implementation of neurobiological metrics to enhance patient assessment. Chapters also address the use of imaging to better define cognitive skills and assessment methods along with the integration of cognitive assessment with imaging to define the functioning of brain networks. The final section of the book discusses the ethical and methodological considerations needed for adopting advanced technologies for neuropsychological assessment. Authored by numerous leading figures in the field of neuropsychology, this volume emphasizes the critical role that virtual environments, neuroimaging, and data analytics will play as clinical neuropsychology moves forward in the future.

S. N. Eisenstadt is well known for his wide-ranging investigations of modernization, social stratification, revolution, comparative civilization, and political development. This collection of twelve major theoretical essays spans more than forty years of research, to explore systematically the bases of human action and society. Framed by a new introduction and an extensive epilogue, which are themselves important statements about processes of institutional formations and cultural creativity, the essays trace the major developments of contemporary sociological theory and analysis. Examining themes of trust and solidarity among immigrants, youth groups, and generations, and in friendships, kinships, and patron-client relationships, Eisenstadt explores larger questions of social structure and agency, conflict and change, and the reconstitution of the social order. He looks also at political and religious systems, paying particular attention to great historical empires and the major civilizations. United by what they reveal about three major dimensions of social life—power, trust, and meaning—these essays offer a vision of culture as both a preserving and a transforming aspect of social

life, thus providing a new perspective on the relations between culture and social structure.

Alphaherpesviruses are a fascinating group of DNA viruses that includes important human pathogens such as herpes simplex virus type 1 (HSV-1), HSV-2, and varicella-zoster virus (VZV): the causative agents of cold sores, genital ulcerous disease, and chickenpox/shingles, respectively. A key attribute of these viruses is their ability to establish lifelong latent infection in the peripheral nervous system of the host. Such persistence requires subversion of the host's immune system and intrinsic antiviral defense mechanisms. Understanding the mechanisms of the immune evasion and what triggers viral reactivation is a major challenge for today's researchers. This has prompted enormous research efforts into understanding the molecular and cellular biology of these viruses. This up-to-date and comprehensive volume aims to distill the most important research in this area providing a timely overview of the field. Topics covered include: transcriptional regulation, DNA replication, translational control, virus entry and capsid assembly, the role of microRNAs in infection and oncolytic vectors for cancer therapy. In addition there is coverage of virus-host interactions, including apoptosis, subversion of host protein quality control and DNA damage response pathways, autophagy, establishment and reactivation from latency, interferon responses, immunity and vaccine development. Essential reading for everyone working with alphaherpesviruses and of interest to all virologists working on latent infections.

How do you teach tolerance, self-awareness, and responsibility? How can you help children deal with fear, mistrust, or aggression? Play a game with them! Games are an ideal way to help children develop social and emotional skills; they are exciting, relaxing, and fun. **101 LIFE SKILLS GAMES FOR CHILDREN: LEARNING, GROWING, GETTING ALONG (Ages 6-12)** is a resource that can help children understand and deal with problems that arise in daily interactions with other children and adults. These games help children develop social and emotional skills and enhance self-awareness. The games address the following issues: dependence, aggression, fear, resentment, disability, accusations, boasting, honesty, flexibility, patience, secrets, conscience, inhibitions, stereotypes, noise, lying, performance, closeness, weaknesses, self confidence, fun, reassurance, love, respect, integrating a new classmate, group conflict. Organized in three main chapters: (I-Games, You-Games and We-Games), the book is well structured and easily accessible. It specifies an objective for every game, gives step-by-step instructions, and offers questions for reflection. It provides possible variations for each game, examples, tips, and ideas for role plays. Each game contains references to appropriate follow-up games and is illustrated with charming drawings.

"As a plain record of a curious form of society which must soon be numbered with the past, the book may continue to possess an interest even when, with the progress of its knowledge, its errors

shall have been corrected and its theories perhaps superseded by others which make a nearer approach to truth." Despite having been criticised later, the book at hand is an important and interesting document of its time. It provided the first complete ethnographical summary of totemism and exogamy, dwelling on its religious and social aspects. Totemism is described as a religious and social system in which people or clans regard themselves as related to certain objects. Exogamy, which is often found in conjunction with totemism, is represented as a system which only allows marriage outside of a specific group. On the whole, Frazer's work includes the origins as well as an ethnographical survey of totemism and exogamy in Australian Aboriginal tribes. Sir James George Frazer was a Scottish social anthropologist who contributed mainly to the studies of mythology and comparative religion and was the first to detail the relations between myths and rituals. His work *Totemism and Exogamy* is also frequently cited by Sigmund Freud in his own study *Totem and Taboo*.

Psychiatric Genetics provides the reader with a complete view of the methodological problems encountered in psychiatry genetics and proposes solutions to commonly occurring questions. The best European and American specialists have given a thorough review on the advantages and disadvantages of genetic epidemiological methods, the way to choose a genetic marker or

a clinical interview and how to ascertain patients, unaffected relatives and controls and what should be the criteria to include a case or a control. New phenotypic methods are described focusing on candidate symptom and endophenotype approaches. Examples coming from cognitive neurosciences, biochemistry, electrophysiology and brain imaging techniques are reviewed. This book will serve as an essential handbook for psychiatrists, psychologists, and geneticists involved in the genetics of psychiatric disorders.

The 8th edition of Wolff's Headache and Other Head Pain remains the definitive reference text in the field. Our knowledge and understanding of headache and its management have changed significantly in the twenty-first century. A new international headache classification has been adopted; headache pathophysiology and genetics have advanced; and epidemiologic studies have burgeoned. We have greater insights into the diagnosis and treatment of the secondary headaches. New treatments are available for primary headache disorders, including migraine, cluster, and chronic daily headache, and our understanding and knowledge are increasing by means of ongoing trials. The 8th edition encompasses all of this new material, with all chapters updated and many new authors added.

On 20 November 2009, the global community celebrates the 20th anniversary of the adoption by the United Nations General Assembly of the Convention on the Rights of the Child, the unique document that sets international standards for the care, treatment and protection of all individuals below age 18. To celebrate this landmark, the United Nations Children's Fund is dedicating a special edition of its flagship report The State of the World's Children to examining the Convention's evolution, progress achieved on child rights, challenges remaining, and actions to be taken to ensure that its promise becomes a reality for all children.
