Effective science teaching requires creativity, imagination, and innovation. In light of concerns about American science literacy, scientists and educators have struggled to teach this discipline more effectively. *Science Teaching Reconsidered* provides undergraduate science educators with a path to understanding students, accommodating their individual differences, and helping them grasp the methods--and the wonder--of science. What impact does teaching style have? How do I plan a course curriculum? How do I make lectures, classes, and laboratories more effective? How can I tell what students are thinking? Why don't they understand? This handbook provides productive approaches to these and other questions. Written by scientists who are also educators, the handbook offers suggestions for having a greater impact in the classroom and provides resources for further research.

Narrative of the Life of Frederick Douglass First published in 1845, Narrative of the Life of Frederick Douglass is an eye-opening depiction of American slavery. Part autobiography, part human-rights treatise, it describes the everyday horrors inflicted on captive laborers, as well as the strength and courage needed to survive. Narrative of the Life of Frederick Douglass Born into slavery on a Maryland plantation in 1818, Frederick Douglass spent years secretly teaching himself to read and write—a crime for which he risked life and limb. After two failed escapes, Douglass finally, blessedly boarded a train in 1838 that would eventually lead him to New York City and freedom. Narrative of the Life of Frederick Douglass Few books have done more to change America's notion of African Americans than this seminal work. Beyond its historical and social relevancy, it is admired today for its gripping stories, the intensity of spirit, and heartfelt humanity. Narrative of the Life of Frederick Douglass This ebook has been professionally proofread to ensure accuracy and readability on all devices. Narrative of the Life of Frederick Douglass Born into a life of bondage, Frederick Douglass secretly taught himself to read and write. It was a crime punishable by death, but it resulted in one of the most eloquent indictments of slavery ever recorded. His gripping narrative takes us into the fields, cabins, and manors of pre-Civil War plantations in the

South and reveals the daily terrors he suffered. Narrative of the Life of Frederick Douglass Written more than a century and a half ago by a Black man who went on to become a famous orator, U.S. minister to Haiti, and leader of his people, this timeless classic still speaks directly to our age. It is a record of savagery and inhumanity that goes far to explain why America still suffers from the great injustices of the past. Narrative of the Life of Frederick Douglass

Hailed by The New York Times as "a compelling dystopian look at paranoia from one of the most unique and perceptive writers of

our time," this brief, captivating novel offers a cautionary tale. The story unfolds within a society in which all traces of individualism have been eliminated from every aspect of life — use of the word "I" is a capital offense. The hero, a rebel who discovers that man's greatest moral duty is the pursuit of his own happiness, embodies the values the author embraced in her personal philosophy of objectivism: reason, ethics, volition, and individualism. Anthem anticipates the themes Ayn Rand explored in her later masterpieces, *The Fountainhead* and *Atlas Shrugged*. Publisher's Weekly acclaimed it as "a diamond in the rough, often dwarfed by the superstar company it keeps with the author's more popular work, but every bit as gripping, daring, and powerful." Anthem is a dystopian fiction novella by Ayn Rand, written in 1937 and first published in 1938 in England. It takes place at some unspecified future date when mankind has entered another dark age characterized by irrationality, collectivism, and socialistic thinking and economics. Technological advancement is now carefully planned (when it is allowed to occur at all) and the concept of individuality has been eliminated.

Seminar paper from the year 2005 in the subject Business economics - Didactics, Economic Pedagogy, grade: 1,7, LMU Munich (Wirtschaftspädagogik), course: International Work Teams, 13 entries in the bibliography, language: English, abstract: We are living in an age of diversity. The roles of teachers, counselors and team leaders have been expanded to include the consideration of the cultural identities of students, clients and team members. Teachers, counselors and team leaders have a responsibility to increase their awareness, knowledge, and skills so that students, clients and team members are taught and counseled with approaches that recognize the influence of cultural group membership. If the responsible persons do not recognize the influence of cultural group membership, their subordinates can be expected to profit only minimally from interactions with them. Therefore, developing multicultural awareness is essential for all counselors to accurately interpret the meaning of cultural similarities and differences. Various theories and models have been developed to explain these changing social conditions. Most of the theories are tailored for business management only. A comprehensive theory proposed by Earley and Gibson, though, incorporates a dynamic, multilevel view of teams. It includes perceptions from various research fields and opens new dimensions. This theory will be explained in chapter 2. Chapter 3 will concentrate on one individual element of the theory, namely social awareness. This term will be commented on from several viewpoints. Theories that the authors

used to explain social awareness will be introduced. Chapter 4 will contemplate social awareness in the model context. It will reflect on how various kinds of team leaders can utilize the model of Earley and Gibson (2002) according to team disposition (i.e. how the team is arranged, is it a loose or a tight structure). In chapter 5 a critical approach on the model will be adapted. Chapter 6 will make a proposal as to how this model can be applied to promote social awareness. Therefore the simulation game Ecotonos will be introduced and it will be questioned on its suitability for this purpose. Finally, chapter 7 is a short summary of the results and a view of possible future developments.

The book is structured as follows: At first the basics and the history of hackathons are described in chapter 1. Afterwards the three phases of a hackathon are described in detail. This is started in chapter 2 with the description of the individual measures which are to be accomplished before the actual event. Here not only technical or organizational aspects are described, but also the important legal aspects are discussed. Subsequently, it is shown what is necessary to carry out a hackathon successfully. For this purpose the actual execution with all its steps is described in chapter 3. Next, chapter 4 looks at the follow-ups, which are often neglected or even completely forgotten. Chapter 5 describes from a participant's point of view the reasons for participating in a hackathon and which aspects guarantee a successful participation. In the following chapter 6 the criticism of the format of the hackathons and their execution is also examined in detail. Eventually, the most important points are summarized in chapter 7, before chapter 8 gives a view into the future of hackathons. Subsequently chapter 9 collects statements and opinions of representatives from industry, science and administration on the topic of hackathons. The book is rounded off in chapter 10 with detailed checklists, which can be directly used for the successful planning, operation and follow-up of hackathons. The book is written for everyone with an interest in how hackathons work, how to create them, and how to successfully participate. It especially targets people in industry or young students who want to run or participate in a hackathon. Houghton Mifflin Harcourt

The book of Dream Vision appears to be compiled from an older Canaanite text in the early Persian era and was likely attached to the Astronomical Book from the beginning. The book of Dreams and Visions is likely the first attempt to retell the history of the world from the point of view of sheep. In this case Israeli sheep, who had to contend with Egyptian wolves, Philistine dogs, Babylonian lions, and Persian eagles. The Astronomical Book was written from the view of Methuselah, Enoch's son, which Dream Visions continues, however, the majority of the text could not date to before the early Persian era. The first six chapters of the book seem like it was attached to the Astronomical Book, along with the beginning of chapter 7, which includes the vision of the sky collapsing and the earth being flooded. This vision of Noah's flood matches the description of the world found in the Astronomical Book, which includes a solid sky above the world, with water above it. After Noah and his three bull sons survived the flood, the species switched from bulls to sheep, indicating the likely point where the original text was extended. These sheep then live out the general history of the Israelites found in the Torah, and some other early Hebrew texts found in the Tanakh (Old Testament). There are a few points where the book of Dream Visions deviates from the other Hebrew texts in a few specific places, such as claiming that the Israelites were descendants of Japheth instead of Shem. Chapters 7 and 8 are both very long in comparison to the first six chapters, supporting the idea that they were an extension to the original work, however, they end with the Persian eagles being destroyed by a God, referred to as the

Lord of Sheep, coming down from the sky and slaughtering the Persians and their allies, and then rebuilding a better temple than the temple that was being worshiped at. The author's view of the temple and the priests that were sent out from it show that he (or she) was not associated with the temple, and viewed the priests as corrupt, a common sentiment expressed in Second Temple era texts.

George Orwell's Nineteen Eighty-Four is unquestionably the most famous dystopian novel of all times. Written in the year of 1948, the author swapped the last two digits while describing a future totalitarian society where the minds, attitudes and actions of the subjects are thoroughly scrutinized by the "Thought Police", suspected dissidents tracked down and where the worship of the mythical party leader Big Brother is forced upon the masses. The low-ranking party member Winston Smith begins secretly to question the whole system and initiates a forbidden love affair with another party member.

A Wrinkle in Time is the winner of the 1963 Newbery Medal. It was a dark and stormy night—Meg Murry, her small brother Charles Wallace, and her mother had come down to the kitchen for a midnight snack when they were upset by the arrival of a most disturbing stranger. "Wild nights are my glory," the unearthly stranger told them. "I just got caught in a downdraft and blown off course. Let me sit down for a moment, and then I'll be on my way. Speaking of ways, by the way, there is such a thing as a tesseract." A tesseract (in case the reader doesn't know) is a wrinkle in time. To tell more would rob the reader of the enjoyment of Miss L'Engle's unusual book. *A Wrinkle in Time*, winner of the Newbery Medal in 1963, is the story of the adventures in space and time of Meg, Charles Wallace, and Calvin O'Keefe (athlete, student, and one of the most popular boys in

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand—and apply—key concepts.
