### ROMANTIC MOVEMENT: A Journey to Nature, Beauty and Imagination, Idealization of Women and Rejection of Industrialization

Nitya Publications

Set against the backdrop of the Indian Freedom Movement, this fiction novel from award-winning Indian writer R. K. Narayan traces the adventures of a young man, Sriram, who is suddenly removed from a quiet, apathetic existence and, owing to his involvement in the campaign of Mahatma Gandhi against British rule in India, thrust into a life as adventurously varied as that of any picaresque hero. "There are writers—Tolstoy and Henry James to name two—whom we hold in awe, writers—Turgenev and Chekhov—for whom we feel a personal affection, other writers whom we respect—Conrad, for example—but who hold us at a long arm's length with their 'courtly foreign grace.' Narayan (whom I don't hesitate to name in such a context) more than any of them wakes in me a spring of gratitude, for he has offered me a second home. Without him I could never have known what it is like to be Indian."—Graham Greene "R. K. Narayan...has been

compared to Gogol in England, where he has acquired a well-deserved reputation. The comparison is apt, for Narayan, an Indian, is a writer of Gogol's stature, with the same gift for creating a provincial atmosphere in a time of change....One is convincingly involved in this alien world without ever being aware of the technical devices Narayan so brilliantly employs."—Anthony West, *The New Yorker*  
[Business and Finance: The Changing Scenario in COVID Times](#)  
 Mometrix Secrets Study Guides  
 How do the benefits of higher education compare with its costs, and how does this comparison vary across individuals and institutions? These questions are fundamental to quantifying the productivity of the education sector. The studies in *Productivity in Higher Education* use rich and novel administrative data, modern econometric methods, and careful institutional analysis to explore productivity issues. The authors examine the returns to undergraduate education, differences in costs by major, the productivity of for-profit schools, the productivity of various types of faculty and of outcomes, the effects of online education on the higher education market, and the ways in which the productivity of different institutions responds to market forces. The analyses recognize five key challenges to assessing productivity in higher

education: the potential for multiple student outcomes in terms of skills, earnings, invention, and employment; the fact that colleges and universities are “multiproduct” firms that conduct varied activities across many domains; the fact that students select which school to attend based in part on their aptitude; the difficulty of attributing outcomes to individual institutions when students attend more than one; and the possibility that some of the benefits of higher education may arise from the system as a whole rather than from a single institution. The findings and the approaches illustrated can facilitate decision-making processes in higher education.

*Victorian Era: The Industrial Revolution* Sankalp Publication  
Vacanāmṛta of Swami Sahajānanda, 1781-1830, work on Swaminarayan.

*Why I Became a Hindu* CRC Press

“In vain I have struggled. It will not do. My feelings will not be repressed. You must allow me to tell you how ardently I admire and love you.” *Pride and Prejudice* by Jane Austen Changes in society, beginning in the 18th century and continuing into our own time, underlie the Romantic Movement. It starts as a reaction against the intellectualism of the Enlightenment, against the rigidity of social structures protecting privilege, and against the materialism of an age which, in the first stirring of the Industrial Revolution, already shows signs of making workers the slaves of machinery and of creating squalid urban environments. Emerging Global Economic Situation: Impact on Trade and Agribusiness in India Motilal Banarsidass Publ.

Growing recognition of the complexity of animals' physical, social, and psychological lives in the wild has led both zookeepers and the zoo-going public to call for higher environmental standards for animals in captivity. Bringing together the work of animal behaviorists, zoo biologists, and psychologists, *Second Nature* explores a range of innovative strategies for environmental enrichment in laboratories and marine parks, as well as in zoos. From artificial fleeing-prey devices for leopards to irregular feeding schedules for whales, the practices discussed have resulted in healthier, more relaxed animals that can breed more easily and can exert some control over their environments. Moving beyond the usual studies of primates to consider the requirements of animals as diverse as reptiles, amphibians, marine mammals, small cats, hooved grazers, and bears, contributors argue that whether an animal forages in the wild or plays computer games in captivity, the satisfaction its activity provides—rather than the activity itself—determines the animal's level of physical and psychological well-being. *Second Nature* also discusses the ways in which environmental enrichment can help zoo-bred animals develop the stamina and adaptability for survival in the wild, and how it can produce healthier lab animals that yield more valid test results. Providing a theoretical framework for the science of environmental enrichment in a variety of settings, the book renews and extends a humane approach to the keeping and conservation of animals.

*Marine Microbial Bioremediation* Archers & Elevators Publishing House

This book is a compendium of papers presented in the ‘International Conference on Emerging Global Economic Situation: Impact on Trade and Agribusiness in India’. The book is structured in four parts with thirty seven papers. The first part discusses the Emerging Trend in Export of Agricultural Commodities, while second part highlights the Emerging Issues in Agribusiness in India. The third part of book presents the performance of Agro-based Industries in India and last part presents Innovation and Emerging Areas in Agriculture. This book will be very useful for all those are interested in issues related to Agribusiness Trade Policies and its implementation in our

country.

Guru Tegh Bahadur Nitya Publications

Due to increased industrialization and urbanization, the marine ecosystem is getting contaminated and it has become imperative to save this ecosystem that is the largest. The book focuses on marine microbial remediation aspects. Major marine pollutants their effect on marine ecosystems, and their removal by ecofriendly, sustainable approach bioremediation have been included. Marine biota due to their unique traits are promising candidates for bioremediation processes. Mechanistic aspects of microbial bioremediation in marine environment have also been discussed

*Narasinha Mehta of Gujarat* Oxford University Press

Marine environments represent an underexplored source for numerous biotechnological applications. Of particular interest are organisms that can provide various valuable molecules and are potential candidates for bioremediation strategies. Fungi, algae, bacteria, yeasts, and sponges are some unique resources in marine ecosystems. But these must be preserved and protected from irreversible damage. Sustainable exploitation through farming systems is the alternative to prevent pressure on harvesting wild marine organisms. Written by an international team of experts, this book provides a broad overview of the possible approaches and technologies that can be applied in bioremediation processes and the possibilities to add value to the biomass produced. It provides a comprehensive state-of-the-art of current research and practice in bioremediation technology and bio-based materials. New processing technologies, and recent technical advances in molecular biology such as gene mining, omics techniques, and metabolic engineering are highlighted. The exciting possibilities that artificial intelligence can bring to the future of the biotechnology industry are also approached. The multidisciplinary nature of this book makes it of interest to a wide range of readers, including researchers, students, consulting professionals, engineers, governmental entities, and institutions working in environmental biotechnology, pollution control and prevention, and chemical processes.

**Current Trends in Marine Biology** CRC Press

*Environmental Nexus Approach: Management of Water, Waste, and Soil* establishes linkages between environmental resources, such as water, waste, and soil, in order to facilitate sustainable management of these resources. It shows the nexus approach as a policy-relevant means of environmental management by focusing on integrated management of water, waste, and soil resources. It synthesizes interdisciplinary theory, concepts, definitions, models, and findings involved in complex global sustainability problem-solving, making it an essential guide and reference. It includes real-world examples and applications making the book accessible to a broader interdisciplinary readership. Features: Explores cutting-edge developments in the environmental nexus approach of water, waste, and soil. Introduces the key mechanisms regarding antibiotic resistance genes, microplastics, and other emerging contaminants in the water, waste, and soil nexus. Investigates the fate and behavior of heavy metals, polyaromatic hydrocarbons, plastics, and pesticides in soil systems and their risk assessment. Provides insights into the latest developments, current research perspectives, technology development, critical thinking, and societal requirements of the environmental nexus between water, waste, and soil. This book is aimed at graduate students and researchers in environmental science and engineering, environmental engineering, and waste management.

This book explores various aspects of thermophilic and halophilic microbes from Eurasian ecosystems, which have proved to offer a unique reservoir of genetic diversity and biological source of extremophiles. It also covers the biotechnological uses of extremophiles, and their potential use in agricultural and industrial applications. The topics addressed include but are not limited to: diversity and microbial ecology, microbe-environment interactions, adaptation and evolution, element cycling and biotechnological applications of thermophiles and halophiles in Eurasian ecosystems. In order to review the progress made in biology and biotechnological applications of thermophiles and halophiles, the book combines review papers and results of original research from various specialists and authorities in the field. It includes several chapters describing the microbial diversity and ecology of geothermal springs distributed among the territory of various Eurasian countries, such as Armenia, Bulgaria, China, Georgia, India, Italy, Pakistan and Turkey. A dedicated chapter discusses selected aspects of thermophilic chemolithotrophic bacteria isolated from mining sites (sulfide

ores); detailed descriptions of various thermophile microbes isolated from high-temperature environments and their biotechnological potential are also provided. Subsequent chapters describe the diversity and ecology of halophilic microbes harbored in saline and hypersaline lakes in Iran, Turkey and China; soil and plant microbiomes in saline arid lands of Uzbekistan; microbial diversity in Asian deserts; and the potential applications of thermophilic and halophilic microbes as exopolysaccharide (EPS) producers, focusing on the chemistry and applications of the EPS they produce. We hope that this book will prove valuable as an up-to-date overview of the current state of research on Eurasian extremophiles in general and thermophiles and halophiles in particular. Many questions remain unanswered, and we hope that it will stimulate further studies in this intriguing and promising field.

Higher education is dynamic, constantly adapting to meet the requirements of students and industry. Transforming Higher Education Through Digitalization: Insights, Tools, and Techniques provides insights from experienced academicians on the digitalization of education and its appropriateness for enhancing the quality of teaching in institutions of higher education. The book also provides insights on technologies used in digital education, the competencies and skills required by teachers and students, managing quality of education through online modes, MOOCs (Massive, Open, Online Courses), and methods to support teachers and instructors in online education. The book also enables teachers and instructors to help students develop the knowledge and skills they need in a digital age and enable them to build collaborative learning that will bring them success. Written for educators, students, and policy makers of higher education, this book demonstrates how to transform traditional education to digital education and to continue their activities without the requirement of students and teachers meeting each other on campus.

#### *B.Sc. Practical Physics* Cambridge Scholars Publishing

The eighteenth century in English literature has been called the Augustan Age the Neoclassical Age, and the Age of Reason. The term 'the Augustan Age' comes from the self-conscious imitation of the original Augustan writers, Virgil and Horace, by many of the writers of the period. Specifically, the Augustan Age was the period after the Restoration era to the death of Alexander Pope (~1690 - 1744). The major writers of the age were Pope and John Dryden in poetry, and Jonathan Swift and Joseph Addison in prose. Dryden forms the link between Restoration and Augustan literature; although he wrote ribald comedies in the Restoration vein, his verse satires were highly admired by the generation of poets who followed him, and his writings on literature were very much in a neoclassical spirit. I particularly aimed at interpretation of sociopolitical milieu of Augustan Age, of social change, of literary tendencies of the age, and of prose, novel, poetry and drama of the Augustan Age.

Drawing on action research with critical insights and also lessons learned from the Pandemic to enhance Business today for a resilient tomorrow, the articles in the book offer an analytical approach to forming a deeper understanding of how business and finance need to get reenergized during and post COVID Times, how business plans and strategies require a fundamental

rethinking to achieve sustainable development goals. Bringing together the academicians and research scholars from all domains of commerce, this edited volume explains and suggests how business can be realigned and accelerated amidst newfound challenges for a more just and prosperous tomorrow.

\*\*\*Includes Practice Test Questions\*\*\* Study Notes for the REM Exam helps you ace the Registered Environmental Manager Exam, without weeks and months of endless studying. Our comprehensive Study Notes for the REM Exam study guide is written by our exam experts, who painstakingly researched every topic and concept that you need to know to ace your test. Our original research reveals specific weaknesses that you can exploit to increase your exam score more than you've ever imagined. Study Notes for the REM Exam includes: The 5 Secret Keys to REM Exam Success: Time is Your Greatest Enemy, Guessing is Not Guesswork, Practice Smarter, Not Harder, Prepare, Don't Procrastinate, Test Yourself; A comprehensive General Strategy review including: Make Predictions, Answer the Question, Benchmark, Valid Information, Avoid Fact Traps, Milk the Question, The Trap of Familiarity, Eliminate Answers, Tough Questions, Brainstorm, Read Carefully, Face Value, Prefixes, Hedge Phrases, Switchback Words, New Information, Time Management, Contextual Clues, Don't Panic, Pace Yourself, Answer Selection, Check Your Work, Beware of Directly Quoted Answers, Slang, Extreme Statements, Answer Choice Families; Comprehensive sections including: Primary Sources of Air Pollution, Clean Air Act, Criteria Air Pollutants, OSHA, Clean Water Act, Protecting Wetlands, Underground Injection Wells, Toxic Substances Control Act, Transporting Hazardous Waste, Assessment and Remediation of Contaminated Sites, Comprehensive Environmental Response, Federal Insecticide, Fungicide, and Rodenticide Act, Endangered Species Act, Pollution Prevention Act, Skills of an Environmental Manager, Life-Cycle Assessment, Environmental Management System, DOT Hazardous Materials Transportation Act, Health and Safety Plans, Best Management Practices, Critical Path Method, Chromatography, Specific Gravity, Determining Relative Humidity, Flammable and Combustible Materials, Hydrocarbons and the Environment, Volatile Organic Compounds, and much more...

*A Concise History of Classical Sanskrit Literature* Notion Press

'The Lion and the Jewel alone is enough to establish Nigeria as the most fertile new source of English-speaking drama since Synge's discovery of the Western Isles.' The Times The ironic development and consequences of 'progress' may be traced through both the themes and the tone of the works included in this second volume of Wole Soyinka's plays. The Lion and the Jewel shows an ineffectual assault on past tradition soundly defeated. In Kongi's Harvest, however, the pretensions of Kongi's regime are also fatal. The denouement points the way forward. The two Brother Jero plays pursue that way, the comic 'propheteering' of the earlier play giving way to the sardonic reality of Jero's Metamorphosis. Madmen and Specialists, Soyinka's most pessimistic play, concerns the physical, mental, and moral destruction of modern civil war.

*The Vachanamrut* CRC Press

The movement known as Hindu Resurgence, Hindu Awakening or Hindu Renaissance has become increasingly noticeable, and there is a distinct effort to liberate Hinduism from the definitions and limitations imposed by the domination of hostile outsiders. However, confusion and lack of proper information are still serious obstacles on the path of proper understanding and realisation. India, or as it was called in ancient times, Bharata Varsha, has an immense potential that can be materialised simply by returning to the correct original perspective of the golden Vedic civilisation that is the natural heritage of all Indians and in fact of all human beings. The Rig Veda samhita (9.63.5) points us in the correct direction: Krinvanto visvam aryam, "Let everyone become arya"

*A Series of Chemical Problems ...* S. Chand Publishing

"Rise Satyavadi Vasuprado, your life in the service of Sri Krishna has now begun...!" Bred in the cesspool of millennia old evil of Hindu caste disorder, feudal prejudices, and religious hatreds, die-hard Sri Krishna devotee, Trilokinath, through the power of Hindu Holy Scripture, injects molten steel into a gentle heart, and ripens, Vasuprado, an innocent, fun-loving boy, for a merciless pogrom. The story meanders through the twilight of colonial India and independence (1947) through the 20th Century and encapsulates the cauldron of simmering vengeful rancour and hate that is 21st Century India: Hindu hating, despising Hindu; Hindu hating despising Muslim; Muslim hating, despising Hindu, Christian, Buddhist, Sikh... "Even if a man of the vilest conduct worships me with undivided devotion, he should be reckoned as righteous for he has rightly resolved." - Sri Krishna.
