Inheritance vs. Polymorphism in Java - Study.com

About This Quiz & Worksheet. Going through the quiz and worksheet lets you determine how much knowledge you have about inheritance vs. polymorphism in Java.

Inheritance, Polymorphism, and Interfaces

Inheritance allows, code reusability and the polymorphism is, the occurrence of one function with different form. The basic difference between inheritance and polymorphism is that inheritance allows the already existing code to be reused again in a program, and polymorphism provides a mechanism to dynamically decide what form of a function to be invoked.

Chapter 8 Inheritance, Polymorphism and Interfaces

Inheritance Polymorphism Encapsulation, the focus of Chapter 9, is the language construct that bundles data and methods into a single class specification. Inheritance and polymorphism are addressed in the following sections. As we'll see, inheritance is a mechanism for sharing common features amongst classes while polymorphism is a

[Chapter 8] 8.3 On Inheritance

Polymorphism is achieved through inheritance and interface implementation. Code relying on polymorphic behavior will still work without any change if new subclasses or new classes implementing the interface are added. If no obvious is-a relationship is present, then polymorphism is best achieved by using aggregation with interface implementation.
