Longman Academic Writing Series 1 [ANSWER KEY]. Springer Nature

Learning, teaching and doing research for more than four decades in both the developing and developed societies gave me a little bit insight into the problems and their possible solutions in some of the developing societies. To combat the socioeconomic and attitudinal complications in these societies, students, teachers, media, policymakers and civil society can play a key role if guided properly which is the main focus of this book. For students and researchers, the communication, generation and application of knowledge have been explained in the simplest possible words and various ways to optimize the utilization of the available resources and relevant issues have been highlighted. Coming back from developed societies to public sector institutions in developing countries and the consequent victimizations at the hands of the most qualified and experienced nation builders and authorities taught me a lot. These stories are now known to everyone and must be addressed by the quarters concerned to avoid further academic losses and the consequent hurdles in socioeconomic development. Instead of telling these stories, the younger generation should learn to push aside the muddy water and swim forward for a bright future. My experience demonstrates the ultimate failure of the evil minds and their tactics who tried their best to force me to do WHAT THE ROMANS NEVER DID. I succeeded in establishing a good research laboratory and training and mentoring of many students despite many hurdles. This proved that there are still some sincere people in these societies and if the young teachers and students work hard, they can achieve whatever they endeavor for. Work hard with honesty and sincerity and the future will be certainly yours. The problems of the developing societies are almost similar; therefore, an introduction to the socio-political and economic background of Khyber Pukhtunkhwa followed by its natural resources and possible utilization is given as a model in the last two chapters which may be useful for all those having similar potentials and issues. Prof. Yaseen Iqbal, C.Eng., FInstP (IOP, UK), PE (PEC) MSc (Physics), PhD (Eng. Materials, England) Chairman, Department of Physics, University of Peshawar, Pakistan

Thirty-five years ago, the four authors of this book addressed the problem of validity in social science research. This revised edition builds on the earlier version's drive to justify novel techniques of survey and archival research. Richly illustrated throughout, the purpose of this book is to authorize and motivate ingenuity in obtaining information. The authors combine very different methods so that research results can withstand the 'threats to validity' which so frequently invalidate single-measure, conventional research.

This thesis reports a rare combination of experiment and theory on the role of geometry in materials science. It is built on two significant findings: that curvature can be used to guide crack paths in a predictive way, and that protected topological order can exist in amorphous materials. In each, the underlying geometry controls the elastic behavior of quasi-2D materials, enabling the control of crack propagation in elastic sheets and the control of unidirectional waves traveling at the boundary of metamaterials. The thesis examines the consequences of this geometric control in a range of materials spanning many orders of magnitude in length scale, from amorphous macroscopic networks and elastic continua to nanoscale lattices.
