Archaeological Theory in Europe OUP
Oxford

Images of the Ice Age, here in its third edition, is the most complete study available of the world's earliest imagery, presenting a fascinating account of the

art of our Ice Age ancestors.

Authoritative and wide-ranging, it covers not only the magnificent cave art of famous sites such as Lascaux, Altamira, and Chauvet, but also other less well-known sites around the world, and open-air and portable art. Lavishly illustrated and highly accessible, *Images of the Ice Age* provides a visual feast and an absorbing synthesis of this crucial aspect of human history, offering a unique opportunity to appreciate universally important works of art, many of which can never be accessible to the public, and which represent the very earliest evidence of artistic expression.

A World Perspective Oxbow Books Limited

Is archaeology an art or a science? This question has been hotly debated over

the last few decades with the rise of archaeological science. At the same time, archaeologists have seen a change in the intellectual character of their discipline, as many writers have adopted approaches influenced by social theory. The discipline now encompasses both archaeological scientists and archaeological theorists, and discussion regarding the status of archaeology remains polarised. In this 2001 book, Andrew Jones argues that we need to analyse the practice of archaeology. Through an analysis of archaeological practice, influenced by recent developments in the field of science studies, and with the aid of extensive case studies, he develops a new framework which allows the interpretative and methodological

components of the discipline to work in tandem. His reassessment of the status and character of archaeology will be of interest to students, scholars and professionals.

Archaeological Investigation Routledge Papers from a conference entitled Archaeology in the Community, held at UCL Institute of Archaeology in 2006.

A Workbook Routledge

Drawing its numerous examples from Britain and beyond, Archaeological Investigation explores the procedures used in field archaeology travelling over the whole process from discovery to publication. Divided into four parts, it argues for a set of principles in part one, describes work in the field in part two and how to write up in part three. Part four describes the modern world in

which all types of archaeologist operate, academic and professional. The central chapter 'Projects Galore' takes the reader on a whirlwind tour through different kinds of investigation including in caves, gravel quarries, towns, historic buildings and underwater.

Archaeological Investigation intends to be a companion for a newcomer to professional archaeology – from a student introduction (part one), to first practical work (part two) to the first responsibilities for producing reports (part three) and, in part four, to the tasks of project design and heritage curation that provide the meat and drink of the fully fledged professional. The book also proposes new ways of doing things, tried out over the author's thirty years in the field and brought together

here for the first time. This is no plodding manual but an inspiring, provocative, informative and entertaining book, urging that archaeological investigation is one of the most important things society does.

*The Present and Future of
Counternarratives* Cram101

This controversial book is a survey of how relationships between indigenous peoples and the archaeological establishment have got into difficulty, and a crucial pointer to how to move forward from this point. With lucid appraisals of key debates such as NAGPRA, Kennewick and the repatriation of Tasmanian artefacts, Laurajane Smith dissects the nature and consequences of this clash of cultures. Smith explores how indigenous communities in the USA and Australia have confronted the pre-

eminence of archaeological theory and discourse in the way the material remains of their past are cared for and controlled, and how this has challenged traditional archaeological thought and practice. Essential reading for all those concerned with developing a just and equal dialogue between the two parties, and the role of archaeology in the research and management of their heritage.

Behavioral archaeology offers a way of examining the past by highlighting human engagement with the material culture of the time. 'Behavioral Archaeology: Principles and Practice' offers a broad overview of the methods

and theories used in this approach to archaeology. Opening with an overview of the history and key concepts, the book goes on to systematically cover both principles and practice: the philosophy of science and the scientific method; artifacts and human behavior; archaeological inference; formation processes of the archaeological record; technological change; behavioral change; and ritual and religion. Detailed case studies show the relevance of behavioral method and theory to the wider field of archaeological studies. The book will be invaluable to students of archaeology and anthropology.

Social Theory in Archaeology and Ancient History Rowman & Littlefield

The 1980s witnessed exciting developments in theoretical writing in Western archaeology. Where previous decades were dominated by the Anglo-American perspective, or "New Archaeology", the recent years showed the European debate grow in confidence

and vitality. This book, published in 1991, captures this spirit of debate as contributors from a wide cross-section of countries evaluate the development of the distinctly national and European characteristics of archaeology and assess future directions. Contributors consider an extensive range of ideologies and viewpoints, stressing the fundamentally historical emphasis and social construction of European archaeology. The development of archaeological theory is traced, with specific emphasis on factors which differ from country to country. Ultimately, it argues that the most active response to archaeology is to celebrate theory within a constantly critical mode. A great insight into the development of theory.

Theory in Africa, Africa in Theory explores the place of Africa in archaeological theory, and the place of theory in African archaeology. The centrality of Africa to global archaeological thinking is highlighted, with a particular focus on materiality and agency in contemporary interpretation. As a means to explore the nature of theory itself, the volume also addresses differences between how African models are used in western theoretical discourse and the use of that theory within Africa. Providing a key contribution to theoretical discourse through a focus on the context of theory-building, this volume explores how African modes of thought have shaped our approaches to a meaningful past outside of Africa. A

timely intervention into archaeological thought, *Theory in Africa, Africa in Theory* deconstructs the conventional ways we approach the past, positioning the continent within a global theoretical discourse and blending Western and African scholarship. This volume will be a valuable resource for those interested in the archaeology of Africa, as well as providing fresh perspectives to those interested in archaeological theory more generally.

Archaeology Essentials Routledge

At a time when archaeology has turned away from questions of the long-term and large scale, this collection of essays reflects on some of the big questions in archaeology and ancient history - how and why societies have grown in scale and complexity, how they have

maintained and discarded aspects of their own cultural heritage, and how they have collapsed. In addressing these long-standing questions of broad interest and importance, the authors develop counter-narratives - new ways of understanding what used to be termed 'cultural evolution'. Encompassing the Middle East and Egypt, India, Southeast Asia, Australia, the American Southwest and Mesoamerica, the fourteen essays offer perspectives on long-term cultural trajectories; on cities, states and empires; on collapse; and on the relationship between archaeology and history. The book concludes with a commentary by one of the major voices in archaeological theory, Norman Yoffee. [Studyguide for Archaeology Cram101](#)
The textbook on what archaeologists do

and how they do it - completely revised and redesigned. For the Fourth Edition, new theoretical approaches, such as agency, materiality, and engagement theory, are added and earlier approaches analyzed afresh. Field methods and scientific techniques have been updated throughout, and new emphasis is placed on climate change and its impact on human affairs. The latest information on topics as varied as the Iceman, Pleistocene extinctions, and llama domestication is included, along with the most up-to-date material on GIS and surveying technology. New topics will be introduced to emphasize the ever-changing face of modern archaeology, and additional special box features will be included, as well as discussion of the archaeological

techniques needed to study the material culture of the twentieth and twenty-first centuries. A key component of the new edition will be the introduction of a dedicated Web site and study guide to accompany the textbook itself. Over 600 illustrations.
