Exploring Tech Careers, Fourth Edition, 2-Volume Set SAGE

Although it is something that affects all of us, directly or indirectly, ageing can all too often be perceived negatively. Ageing and Caring is an essential, positive guide for older people, their carers and their families. It seeks to outline not only the challenges that can arise from ageing but also how active and rewarding life can continue to be in old age. From practical advice on remaining active in retirement, to guidance on coping with a loss of independence, Ageing and Caring provides advice on the complexities of ageing, covering an array of issues that older people and their carers may face: What you need to know about ageing — healthy ageing, managing your finances, and accessing health services Common health problems experienced by older people, such as diabetes; sight, mobility and memory difficulties; and loneliness and depression The final years of life, such as moving into a nursing home, should it be required, and advance care planning Ageing and Caring underlines the importance of well-being in old age and offers practical advice on how to maintain a happy and fulfilling life, whatever the challenges.

Ageing and Caring Learning Matters

This well researched book provides an interesting study of the development of fever hospitals and fever nursing, mainly in nineteenth and twentieth century Britain. It provides new insights into the development of nursing roles and nurse education and looks at the lives of key figures at that time. The text examines how this once important branch of the nursing profession emerged in the

nineteenth century, only to be discarded in the second half of the following century. Drawing on the work of Goffman and Foucault, the study shows how, aided by medical advances, fever nurses transformed their custodial duties into a therapeutic role and how training schemes were implemented to improve the recruitment and retention of nurses. As standards of living improved and patient's chances of recovery increased, many fever hospitals became redundant and fever nurses were no longer required. The wisdom of creating fever hospitals and then disbanding them is questioned in the light of changing disease patterns, international travel and the threat posed by biological warfare.
