A New Era for Irrigation

Morgan Kaufmann

The Zurich architects

Annette Spillmann and

Harald Echsle became

renowned in 2006 with

their container tower for

the FREITAG bag and

fashion label in Zurich. It

represents 'architecture

without architects' while

also being a nonchalant

solution for a common

architectural programme

in the midst of an

inhospitable residual

zone. The 2013 'House of

Switzerland' in Sochi

(Russia) is intelligently

derived from the same

approach. Text in English

and German.

As political violence escalates around them, a young boy and his single mother live together in an apartment in Buenos Aires - which has recently been taken over by Argentina's military dictatorship. When the boy returns home one day to find his mother missing, the story fractures, and the reader encounters him fully grown, consumed by the burden of his loss, attempting to reconstruct the memory of his mother. By leaping forward in time, the boy - now a man - subtly gives shape to his mother's activism, and in the process recasts the

memories from his childhood.

The Way Out Walter de Gruyter GmbH & Co KG

In Defense of Degrowth World Health Organization
Irrigated agriculture has played a critical role in the economic and social development of the United States--but it is also at the root of increasing controversy. How can irrigation best make the transition into an era of increasing water scarcity? In A New Era for Irrigation, experts draw important conclusions

about whether irrigation can continue to be the nation's most significant water user, what role the federal government should play, and what the irrigation industry must do to adapt to the conditions of the future. A New Era for Irrigation provides data, examples, and insightful commentary on issues such as Growing competition for water resources. Developments in technology and science. The role of federal subsidies for crops and water. Uncertainties related to American Indian water rights issues. Concern about environmental problems. And more. The committee identifies broad forces of change and reports on how public and private institutions, scientists and technology experts, and individual irrigators have responded. The report includes detailed case studies from the Great Plains, the Pacific Northwest, California, and Florida, in both the agricultural and turfgrass sectors. The cultural transformation brought about by irrigation may be as profound as the transformation of the landscape. The committee examines major facets of this cultural perspective and explores its place in

the future. A New Era for Irrigation explains how irrigation emerged in the nineteenth century, how it met the nation's goals in the twentieth century, and what role it might play in the twenty-first century. It will be important to growers, policymakers, regulators, environmentalists, water and soil scientists, water rights claimants, and interested individuals. *Applications of Item Response Theory to Practical Testing Problems* The orange juice businessA Brazilian perspective First published in 1980. Routledge is an imprint of Taylor & Francis, an informa company. **The Role and Impact of International Labour Standards** Routledge Drawing on research from eleven countries across four continents, the 16 chapters in the volume bring perspectives from various specialties in anthropology and human ecology, institutional analysis, historical and political ecology, geography, archaeology, and land change sciences. The four sections of the volume reflect complementary approaches to HEI: health and adaptation approaches, land change

and landscape management approaches, institutional and political-ecology approaches, and historical and archaeological approaches.

Consequently, struggles to protect the environment from over-exploitation and contamination have been related to marginalized groups' struggles against

local, national and transnational elites. The recent rise of progressive, left-leaning governments - often supported by groups struggling for environmental justice - has challenged the established elites and raised expectations about new regimes for natural resource management. Based on case-studies in eight Latin American countries (Argentina, Brazil, Chile, Ecuador, Colombia, Bolivia, El Salvador and Guatemala), this book investigates the extent to which there have been elite shifts, how new governments have related to old elites, and how that has impacted on environmental governance and the management of natural resources. It examines the rise of new cadres of technocrats and the old economic and political elites' struggle to remain influential. The book also discusses the challenges faced in trying to overcome structural inequalities to ensure a more sustainable and equitable governance of natural resources. This timely book will be of great interest to researchers and masters students in development studies, environmental

management and governance, geography, political science and Latin American area studies.

Globalization and Social Progress Springer Science & Business Media

In a series of essays, this book describes and analyzes the concept and theory of the recent smart city phenomenon from a global perspective, with a focus on its implementation around the world. After defining the concept it then elaborates on the role of Information and Communication Technology (ICT) as an enabler for smart cities, and the role of ICT in the interplay with smart mobility. A separate chapter develops the concept of an urban smart dashboard for stakeholders to measure performance as well as the economic and public value. It offers examples of smart cities around the globe, and two detailed case studies on Genoa and Amsterdam exemplify the book's theoretical and empirical findings, helping readers understand and evaluate the effectiveness and capability of new smart city programs.

Over the past twenty years, Catalysis by

Heteropolyacids (HPAs) has received wide attention and led to new and promising developments both at academic and industrial level. In particular, heterogeneous catalysis is particularly attractive because it generally satisfies most of green chemistry's requirements. By emphasizing the development of third generation catalysts, this volume presents trends and opportunities in academic and industrial research. The book appeals to postgraduates, researchers, and chemists working in the field of environmentally benign catalysts as well as catalytic processes.

Conquering the dating market—from an economist's point of view
After more than twenty years, economist Paul Oyer found himself back on the dating scene—but what a difference a few years made. Dating was now dominated by sites like Match.com, eHarmony, and OkCupid. But Oyer had a secret weapon: economics. It turns out that dating sites are no different than the markets Oyer had spent a

lifetime studying. Monster.com, eBay, and other sites where individuals come together to find a match gave Oyer startling insight into the modern dating scene. The arcane language of economics—search, signaling, adverse selection, cheap talk, statistical discrimination, thick markets, and network externalities—provides a useful guide to finding a mate. Using the ideas that are central to how markets and economics and dating work, Oyer shows how you can apply these ideas to take advantage of the economics in everyday life, all around you, all the time. For all online daters—and for anyone else swimming in the vast sea of the information economy—this book uses Oyer's own experiences, and those of millions of others, to help you navigate the key economic concepts that drive the modern age. *Creating Economic and Public Value in Innovative Urban Systems* Prentice Hall PTR
This book covers two applications of ontologies in software engineering and software technology: sharing knowledge of the problem domain and

using a common terminology among all stakeholders; and filtering the knowledge when defining models and metamodels. By presenting the advanced use of ontologies in software research and software projects, this book is of benefit to software engineering researchers in both academia and industry.

Intended both as a text for advanced undergraduates and graduate students, and as a key reference work for AI researchers and developers, *Logical Foundations of Artificial Intelligence* is a lucid, rigorous, and comprehensive account of the fundamentals of artificial intelligence from the standpoint of logic. The first section of the book introduces the logicist approach to AI--discussing the representation of declarative knowledge and featuring an introduction to the process of conceptualization, the syntax and semantics of predicate calculus, and the basics of other declarative representations such as frames and semantic

nets. This section also provides a simple but powerful inference procedure, resolution, and shows how it can be used in a reasoning system. The next several chapters discuss nonmonotonic reasoning, induction, and reasoning under uncertainty, broadening the logical approach to deal with the inadequacies of strict logical deduction. The third section introduces modal operators that facilitate representing and reasoning about knowledge. This section also develops the process of writing predicate calculus sentences to the metalevel--to permit sentences about sentences and about reasoning processes. The final three chapters discuss the representation of knowledge about states and actions, planning, and intelligent system architecture. End-of-chapter bibliographic and historical comments provide background and point to other works of interest and research. Each chapter also contains numerous student exercises (with solutions provided in an appendix) to reinforce concepts and challenge the learner. A bibliography and index

The orange juice chain is unique, probably a sui generis commodity. Although several countries produce oranges and juices, two regions in the world are the responsible for around 80% of the production. These are the states of Sao Paulo in Brazil and Florida in the USA. Although the emerging countries are growing in production, the juice consumer is also concentrated in the USA and Europe where more than 90% of consumption takes place. The characteristics of this chain are so unique, that it makes a nice laboratory for academics and business people to exercise strategies, since risk is spread. Orange is a very sensitive plant, and fluctuations in production are notorious. The logistics of this chain are fascinating. The product travels great distances to reach the consumer in a generally safe and efficient way. The industry assets such as vessels and tanks are specific. By reading this book,

business people, academics and chain practitioners have an opportunity to understand this chain. and can analyse all of its numbers and economics and exercise strategy building. This is needed since the orange juice market is a stable market in the world, growing only 1% per year, and the production costs of this chain are rising fast, due to structural changes faced by world food and agribusiness companies i.e. labour costs, energy costs, land costs, environmental costs and others. The book will be of interest to all those concerned with agri food

chains.

A powerful challenge to the way we understand the politics of race and the history of anti-racist struggle Whether class or race is the more important factor in modern politics is a question right at the heart of recent history's most contentious debates. Among groups who should readily find common ground, there is little agreement. To escape this deadlock, Asad Haider turns to the rich legacies of the black freedom struggle. Drawing on the words and deeds of black

revolutionary theorists, he argues that identity politics is not synonymous with anti-racism, but instead amounts to the neutralization of its movements. It marks a retreat from the crucial passage of identity to solidarity, and from individual recognition to the collective struggle against an oppressive social structure. Weaving together autobiographical reflection, historical analysis, theoretical exegesis, and protest reportage, *Mistaken Identity* is a passionate call for a new practice of politics beyond colorblind chauvinism and "the ideology of race."
