 Excerpt from Winter Eggs: A Handbook on Utility Poultry Keeping, Embodying the American Intensive Methods, With Complete Index There can be no two opinions as to the desirability of largely developing the poultry industry in this country, and the reform of the Irish egg trade shows what can be done by adopting a rational system of collection and marketing. But this little book deals with another aspect of the case, giving full details of the American intensive system of poultry rearing, which is now on its trial in this country, in the hope that it may lead to a large increase in production. It seems to be generally agreed that - apart from the production of pedigree stock and the taking of pupils - poultry farming on the ordinary English lines does not pay when considerable sums have to be expended on food, and a large area devoted to its practice. It is of course a most valuable accessory industry, regarded as a means of utilising certain forms Of waste, and is sufficiently remunerative on a small scale. The American system enables an enormous reduction to be made in the space required, and claims to reduce the cost of production so that satisfactory profits can be made even when large quantities of food have to be bought. The author has made a careful theoretical and practical study of the subject, and the numerous poultry-keepers who desire to test the intensive system will find this book a thoroughly practical guide. But even if American methods are proved to be suitable for Britain, success in their application cannot be expected without constant supervision, and strict attention to detail. J R. Ainsworth-davis. The aim of this book is to help create new feedstuffs for poultry and farm animals from the agro-industry and to mobilize the neglected waste as a feedstuff to lower the price of animal products such as eggs, white and red meat, milk, etc. Furthermore, this book aims to contribute to the campaign against hunger in the developing world and to reduce the competition between animals and human beings for cereals and pulses. Accordingly the global pollution problem will be reduced. This book will be of great interest to all those involved in the animal feed and poultry industries, in agricultural universities, and in research establishments where animal nutrition is studied and taught.
