[2 SC Johnson Lint a C Program Checker](#)

[USENIX UNIX ...](#)

lint, or a linter, is a static code analysis tool used to flag programming errors, bugs, stylistic errors, and suspicious constructs. The term originates from a Unix utility that examined C language source code.

[CiteSeerX — Lint, a C Program Checker](#)

Description lint detects features of C program files which are likely to be bugs, non-portable, or wasteful. It also checks type usage more strictly than the compiler. lint issues error and warning messages.

Lint Tools - checking C/C++ programs

lint examines code in two passes. In the first pass, lint checks for error conditions within C source files; in the second pass, it checks for inconsistencies across C source files. This process is invisible to the user unless lint is invoked with -c : % lint -c file1.c file2.c.

lint Source Code Checker This chapter

explains how you can use the lint program to check your C code for errors that may cause a compilation failure or unexpected results at runtime. In many cases, lint warns you about incorrect, error-prone, or nonstandard code that the compiler does not necessarily flag.
