 "After many decades - and even more methodologies - software projects are still failing. Why? Managers see software development as a production line. Companies don't know how to manage software projects and hire good developers. Many developers still behave like factory workers, providing terrible service to their employers and clients. Agile was a big step forward, but not enough. What's missing? The right mindset - for both developers and their employers. As developers worldwide are recognizing, the right mindset is craftsmanship ... Mancuso explains what craftsmanship means to the developer and his or her organization, and shows how to live it every day in your real-world development environment. Mancuso shows how software craftsmanship fits with and helps you improve upon best-practice technical disciplines such as agile and lean, taking all your development projects to the next level. You'll learn how to change the disastrous perception that software developers are the same as factory workers, and that software projects can be run like

factories. By placing greater professionalism, technical excellence, and customer satisfaction at the heart of what you do, you won't just deliver more value to everyone involved: you'll be happier and more fulfilled doing it"--Publisher's description.

The Agile Self-Assessment Game is used by teams and organizations to self-assess their agility.

Playing the game enables teams to reflect on their own team interworking, discover how agile they are and decide what they can do to increase their agility to deliver more value to their customers and stakeholders. This is the first book specifically about Agile Self-assessments. In this book, Ben Linders explains what self-assessments are and why you would do them, and explores how to do them using the Agile Self-assessment Game. He's also sharing experience stories from people who played the game. This book is based on his experience as a developer, tester, team leader, project manager, quality manager, process manager, consultant, coach, trainer, and adviser in Agile, Lean, Quality and Continuous Improvement. It takes a deep dive into self-assessments, viewing them from different perspectives and provides ideas, suggestions, practices, and experiences that will help you to do effective agile self-assessments with your teams. The book is aimed at Scrum masters, agile coaches, consultants leading agile transformations, developers and testers, project managers, line managers, and CxOs; basically for anyone who is looking for an effective way to help their agile teams improve and to increase the agility of their organization. With plenty of ideas, suggestions, and practical cases on Agile Self-assessments, this book will help you to apply assessments and help teams to improve. Note: The agile coaching cards needed to play the games described in the book can be downloaded for a nominal fee at [benlinders.com/downloads](https://benlinders.com/downloads).

Uncover surprises, risks, and potentially serious bugs with exploratory testing. Rather than designing all tests in advance, explorers design and execute small, rapid experiments, using what they learned from the last little experiment to inform the next. Learn essential skills of a master explorer, including how to analyze software to discover key points of vulnerability, how to design experiments on the fly, how to hone your observation skills, and how to focus your efforts. Software is full of surprises. No matter how careful or skilled you are, when you create software it can behave differently than you intended. Exploratory testing mitigates those risks. Part 1 introduces the core, essential skills of a master explorer. You'll learn to craft charters to guide your exploration, to observe what's really happening (hint: it's harder than it sounds), to identify interesting variations, and to determine what expected behavior should be when exercising software in unexpected ways. Part 2 builds on that foundation. You'll learn how to explore by varying interactions, sequences, data, timing, and configurations. Along the way you'll see how to incorporate analysis techniques

like state modeling, data modeling, and defining context diagrams into your explorer's arsenal. Part 3 brings the techniques back into the context of a software project. You'll apply the skills and techniques in a variety of contexts and integrate exploration into the development cycle from the very beginning. You can apply the techniques in this book to any kind of software. Whether you work on embedded systems, Web applications, desktop applications, APIs, or something else, you'll find this book contains a wealth of concrete and practical advice about exploring your software to discover its capabilities, limitations, and risks.

An Agile Coach is someone who helps build super-productive Agile Teams and Agile Organizations. This book provides a well-rounded structured approach to become an Agile Coach, comprising three phases, Learning, Living, and Loading. In the learning phase, the Agile Coach goes through the comprehensive profile of the Agile Coach in terms of twelve commandments. Apart from theoretical learning, an Agile Coach needs to have hands-on experience in coaching. This book explains a great technique 'LivingAgile project' that was used to build thousands of Agile Coaches. The book shows how the Agile Coach can gradually accumulate the experience of coaching from single team to team of teams to organization level coaching by leveraging LivingAgile technique on a variety of scenarios. While learning and living are the foundational activities to become an Agile Coach, she should also prepare to demonstrate her ability to external stakeholders such as a potential employer. This book provides related tips and an outline to prepare for interviews.

Los servicios software se han convertido en un factor clave en el crecimiento de cualquier economía desarrollada. Este hecho ha motivado el interés de los distintos actores económicos por desarrollar una Ciencia de los Servicios, también conocida desde una perspectiva más amplia como Ciencia, Gestión e Ingeniería de los Servicios (SSME). En este marco, las XII Jornadas de Ciencia e Ingeniería de Servicios (JCIS 2016) se constituyen como un foro de discusión e intercambio de conocimiento y experiencias. El interés no sólo se centra en los nuevos avances científicos, sino también en las tecnologías existentes en torno a la computación orientada a servicios y los procesos de negocio, las nuevas prácticas de ingeniería de servicios y las lecciones aprendidas por medio de experiencias reales. Desde sus inicios, JCIS pro-picia el encuentro de todas las comunidades relacionadas con el ámbito de la Ingeniería de Servicios incluyendo Servicios Web, SOA, Procesos de Negocio, etc. Con este enfoque pretendemos mantener e incrementar la comunicación y el intercambio de experiencias entre los profesionales de la industria, la administración y los investigadores más relevantes en las áreas involucradas. JCIS 2016 es una conferencia organizada bajo los auspicios de Sistedes (Sociedad de Ingeniería del Software y Tecnologías de Desarrollo de Software) y celebrada en Salamanca dentro del V Congreso Español de Informática (CEDI 2016).

Have we entered the age of NoOps infrastructures? Hardly. Old-style system administrators may be disappearing in the face of automation and cloud computing, but operations have become more significant than ever. As this O'Reilly Radar Report explains, we're moving into a more complex arrangement known as "DevOps." Mike Loukides, O'Reilly's VP of Content Strategy, provides an incisive look into this new world of operations, where IT specialists are becoming part of the development team. In an environment with thousands of servers, these specialists now write the code that maintains the infrastructure. Even applications that run in the cloud have to be resilient and fault tolerant, need to be monitored, and must adjust to huge swings in load. That was underscored by Amazon's EBS outage last year. From the discussions at O'Reilly's Velocity Conference, it's evident that many operations specialists are quickly adapting to the DevOps reality. But as a whole, the industry has just scratched the surface. This report tells you why.
