From Aspirin to Viagra, insulin to penicillin, and vaccines to vitamin supplements, drugs have become part of our everyday lives. This staggering global industry wasn't born overnight; advancements in pharmaceutical science have been happening for a long while, over the course of decades and even centuries. This book tells the history of ten prominent substances and how they came to be common household names. It shows how the creation of such influential drugs often began with the right person at the exactly right—or wrong!—time. The chapters tell the stories of geniuses and charlatans; scholars and amateurs; advances won through hard work or pure luck; and ultimately, the handful of resounding successes that revolutionized a global industry. Beyond the pioneers of the most famous drugs in our culture, the book analyzes how our perspective on medical treatment has shifted over the decades. Modern standards for testing and administering substances have created a new set of advantages, setbacks, and stigmas, all of which are discussed herein.

But he risks unleashing the wild demon buried deep within him and losing his soul in the process. The Architect: Reconstructing Her Practice examines how the introduction of women to the main body of architecture might bring about a reconstruction of the orders that pervade architectural production and consumption. At a moment when the architectural profession is beginning to shift from its traditionally male domination, The Architect: Reconstructing Her Practice examines how the introduction of women to the main body of architecture might bring about a reconstruction of the orders that pervade architectural production and consumption. In a collection of autobiographical essays in which practice is both the site and the vehicle for change, twelve American and European architects reflect on the nature of critical practice and its relation to architecture. The contributors were chosen not only for the distinguished quality of their work, but also for the range of architectural practices they collectively encompass--from the intersection of theory and philosophy to the intersection of building process and industry. Together, they present a compelling and provocative critique of architectural culture. All show a willingness to transgress the various mediums and territories of architecture, to recover and reopen certain discussions lost in the architectural discourse they have inherited.
