3D Face Processing: Modeling, Analysis and Synthesis introduces the frontiers of 3D face processing techniques. It reviews existing 3D face processing techniques, including techniques for 3D face geometry modeling; 3D face motion modeling; and 3D face motion tracking and animation. Then it discusses a unified framework for face modeling, analysis and synthesis. In this framework, the authors present new methods for modeling complex natural facial motion, as well as face appearance variations due to illumination and subtle motion. Then the authors apply the framework to face tracking, expression recognition and face avatar for HCI interface. They conclude this book with comments on future work in the 3D face processing framework. 3D Face Processing: Modeling, Analysis and Synthesis will interest those working in face processing for intelligent human computer interaction and video surveillance. It contains a comprehensive survey

on existing face processing techniques, which can serve as a reference for students and researchers. It also covers in-depth discussion on face motion analysis and synthesis algorithms, which will benefit more advanced graduate students and researchers.

If given another chance to write for the series, which albums would 33 1/3 authors focus on the second time around? This anthology features compact essays from past 33 1/3 authors on albums that consume them, but about which they did not write. It explores often overlooked and underrated albums that may not have inspired their 33 1/3 books, but have played a large part in their own musical cultivation. Questions central to the essays include: How has this album influenced your worldview? How does this album intersect with your other creative and critical pursuits? How does this album index a particular moment in cultural history? In your own personal history? Why is the album perhaps under-the-radar, or a buried treasure? Why can't you stop listening to it? Bringing together 33 1/3's rich array of writers, critics, and scholars, this collection probes our taste in albums, our longing for certain tunes, and our desire to hit repeat--all while creating an expansive "must-listen" list for readers in search of unexplored musical territories.

Following on from a consultation paper (Consultation paper 174; ISBN 0117302562) published in January 2004, this report contains proposals for reform of the law regarding the termination of a tenancy during its term, by a landlord, due to the tenant having broken the terms of the tenancy agreement. It sets out, in the form of a draft Bill, a new statutory scheme for the termination of tenancies, including a new concept of 'tenant default', to replace the current law of forfeiture. The proposed scheme would define the circumstances in which a landlord may seek to terminate a tenancy early, require the landlord to warn the tenant of the impending action by giving a written notice, and confers enhanced protection on those with interests deriving out of the tenancy. The report is divided into eight parts with three appendices, and issues considered include: problems with the current law of forfeiture of tenancies and the case for reform; the various components of the proposed scheme, including the concept of tenant default and the stages of a landlord's 'termination claim'; and the role of the court.
