The deep subsurface is, in addition to space, one of the last unknown frontiers to human kind. A significant part of life on Earth resides in the deep subsurface, hiding great potential of microbial life of which we know only

little. The conditions in the deep terrestrial subsurface are thought to resemble those of early Earth, which makes this environment an analog for studying early life in addition to possible extraterrestrial life in ultra-extreme conditions. Early microorganisms played a great role in shaping the conditions on the young Earth. Even today deep subsurface microorganisms interact

with their geological environment transforming the conditions in the groundwater and on rock surfaces. Essential elements for life are richly present but in difficultly accessible form. The elements driving the microbial deep life is still not completely identified. Most of the microorganisms detected by novel molecular techniques still lack cultured representatives.

Nevertheless, using modern sequencing techniques and bioinformatics the functional roles of these microorganisms are being revealed. We are starting to see the differences and similarities between the life in the deep subsurface and surface domains. We may even begin to see the function of evolution by comparing deep life to life closer to the surface of Earth. Deep life consists of organisms from all known domains of life. This Research Topic reveals some of the rich

diversity and functional properties of the great biomass residing in the deep dark subsurface. Boating UM Libraries Economists say there is a limit to what we gain by buying consumer goods. Americans say they want to work less. Yet we continue toiling away and use the proceeds to buy, buy, buy. Why? Stephen Rosenberg offers a novel theory, arguing that workers have learned to treat goods as stores of potential free time, legitimating endless wage work.

The primary aim of this study is to trace the evolution of public policy in the United States in the broad area of labor-management relations. The attempts of organized labor and management groups to

influence public policy through the political process are examined, with a more detailed examination of labor and management political struggles in Massachusetts. This title will be of interest to students of political and labor history.

What does it take to make a great motion picture?

What do we even mean by cinematic greatness?

What is more important:

movie awards, critical acclaim, or box office success? Who has the

biggest impact: the writer, the director, or the actors? Scientific research

has provided some provocative answers. This

review of cinematic

creativity and aesthetics is confined to scientific studies carried out by a multidisciplinary group of researchers. Do great films receive both shiny trophies and five stars? Chapter 2 concentrates on movie awards, including the Oscars and Golden Globes, and how those awards relate to critical acclaim. How do the dramatic awards compare with the visual, technical, and music awards? Chapter 3 studies more closely how these awards cluster together and which of these

clusters best predict cinematic success. How does box office compare with critical evaluations and movie awards? Chapter 4 adds a new consideration, namely the film's financial performance. The following four chapters focus on specific contributions to a film's impact: Chapter 5 covers the script (including writers), Chapter 6 the director (or "auteur"), Chapter 7 the actors (especially gender differences), and Chapter 8 the music (both scores

and songs). Chapter 9 addresses the question of whether the same cinematic factors that make some films great also make other films bad: Are bombs the exact opposite of masterpieces? The book closes with an epilogue on future directions in scientific studies of cinematic creativity and aesthetics. What do researchers need to do if we want a complete understanding of what it takes to create a powerful cinematic experience? This volume will be invaluable to

anyone interested in film, including any aficionado who is open to a scientific approach, and researchers in the areas of creativity, aesthetics, and cultural economics. The reported research comes from many disciplines, including psychology, sociology, economics, management, marketing, communications, journalism, broadcasting, history, musicology, and statistics.
