Prior Knowledge Questions (Do these BEFORE using the Gizmo.) Two pots have been sitting on the stove for a while. One pot has a

copper handle and the other has a wooden handle. Which handle would you rather touch? Why? Conduction and Convection

Two flasks hold colored water, one yellow and the other blue. Set the starting temperature of each flask, choose a type of material to connect the flasks, and see how quickly the flasks heat up or cool down. The flasks can be connected with a hollow pipe, allowing the water in the flasks to mix, or a solid chunk that transfers heat but prevents mixing.

 The transfer of heat is through heated solid substance, in conduction, whereas in convection the heat energy is transmitted by way of intermediate medium. Unlike, radiation uses electromagnetic waves to transfer heat. The speed of conduction and convection

is slower than radiation.
