Strategies to Protect and Bully-Proof Yourself at Work Thomas Dunne Books

"Crammed with provocative insights, raw emotion, and heartbreaking dilemmas," (The New York Times) *First, Do No Harm* is a powerful examination of how life and death decisions are made at a major metropolitan hospital in Houston, as told through the stories of doctors, patients, families, and hospital administrators facing unthinkable choices. What is life worth? And when is a life worth living? Journalist Lisa Belkin examines how these questions are asked and answered over one dramatic summer at Hermann Hospital in Houston, Texas. In an account that is fascinating, revealing, and almost novelistic in its immediacy, Belkin takes us inside a major hospital and introduces us to the people who must make life and death decisions every day. As we walk through the hallways of the hospital we meet a young pediatrician who must decide whether to perform a risky last-ditch surgery on a teenager who has spent most of his fifteen years in a hospital; we watch as new parents battle with doctors over whether to disconnect their fragile, premature twins from the machine that keeps them breathing; we are in the operating room as a poor immigrant, paralyzed from a gunshot in the neck, is asked by doctors whether or not he wishes to stay alive; we witness the worry of a kidney specialist as he decides whether or not to transfer an uninsured baby to the county hospital down the road. We experience critical moments in the lives of these real people as Belkin explores challenging issues and questions involving medical ethics, human suffering, modern technology, legal liability, and financial reality. As medical technology advances, the choices grow more complicated. How far should we go to save a life? Who decides? And who pays?

Do Her No Harm Springer

'Do No Harm' follows a disturbed sociopath and the Emergency Room Chief who becomes not only his prey but his only protector.

Power, Oppression, and Violence in Healthcare Interpretive Studies in Health

T. A. Cavanaugh's Hippocrates' Oath and Asclepius' Snake: The Birth of the Medical Profession articulates the Oath as establishing the medical profession's unique internal medical ethic - in its most basic and least controvertible form, this ethic mandates that physicians help and not harm the sick. Relying on Greek myth, drama, and medical experience (e.g., homeopathy), the book shows how this medical ethic arose from reflection on the most vexing medical-ethical problem -- injury caused by a physician -- and argues that deliberate iatrogenic harm, especially the harm of a doctor choosing to kill (physician assisted suicide, euthanasia, abortion, and involvement in capital punishment), amounts to an abandonment of medicine as an exclusively therapeutic profession. The book argues that medicine as a profession necessarily involves stating before others what one stands for: the good one seeks and the bad one seeks to avoid on behalf of the sick, and rejects the view that medicine is purely a technique lacking its own unique internal ethic. It concludes noting that medical promising (as found in the White Coat Ceremony through which U. S. medical students

matriculate) implicates medical autonomy which in turn merits respect, including honoring professional conscientious objections.

First, Do No Harm Bloomsbury Publishing

Physician assistant Pierce Parker wants nothing more than to find true love, but after a series of heartbreaks and lackluster first dates, she's beginning to question if such a thing even exists. That is, until she begins working with Dr. Cassidy Sullivan, a new emergency medicine resident. Their chemistry makes Pierce start to believe all her dreams will come true, but a secret from Cassidy's past may end the fairy tale before it gets to happily ever after. For Pierce and Cassidy, the risk of heartbreak may be too high a price for the chance at love.

A Doctor Confronts Medical Error Harper Collins

One unsolved murder. A best friend determined to right the wrongs of the past. On the 21st August Tabitha Rice disappeared without a trace. All the signs point to murder, but no signs point to a murderer. The easiest answer is her husband, Rick. But he protests his innocence and there is little proof he is the murderer. Annabella knows there is more to the story than what the police are telling. Tabitha was her best friend and she vows to uncover the truth. As Annabella delves further into the past, she uncovers sides to Tabitha that she never saw coming, and she finds herself asking the question... Was this murder? Or is there more to Tabitha Rice's story than meets the eye? Perfect for fans of Louise Candlish, *The Silent Patient* and *Blood Orange*.

Islamic Perspective Fawcett Books

Readers of J. T. Ellison and Tess Gerritsen will be enthralled by *Do No Harm*, by real-life small-town doctor and national bestselling author Dawn Eastman. Small-town doctor Katie LeClair is drawn back into an old murder investigation, a mysterious disappearance, and a dark undercurrent of violence. The idyllic town of Baxter, Michigan, seemed like the perfect place for Dr. Katie LeClair to settle down after years toiling in medical school—until the murder of a patient shattered the peace she had found. Now on the mend and balancing the responsibilities of a new house and the joys of a new romance, Katie is finally ready to start enjoying life. But danger arrives just as the town is gearing up for its annual Halloween festival—and once again, this doctor-turned-sleuth will have to unmask a killer in their midst. Trouble comes in threes this Halloween. Katie sees a new patient who has just been released from prison for a murder he says he didn't commit. Inexplicably, the patient suddenly goes missing. And matters take an even more sinister turn when a college student who had been investigating Katie's old murder case is found dead in the woods near Baxter. Could Katie's involvement with the case be responsible for the student's violent death? Is her new patient truly a cold-blooded murderer? Is this Halloween about to become a real-life horror show? Katie embarks on a desperate race to find the truth in *Do No Harm*, the second gripping Dr. Katie LeClair mystery.

brain surgeon? How does it feel to hold someone's life in your hands, to cut into the stuff that creates thought, feeling, and reason? How do you live with the consequences of performing a potentially lifesaving operation when it all goes wrong? In neurosurgery, more than in any other branch of medicine, the doctor's oath to "do no harm" holds a bitter irony. Operations on the brain carry grave risks. Every day, leading neurosurgeon Henry Marsh must make agonizing decisions, often in the face of great urgency and uncertainty. If you believe that brain surgery is a precise and exquisite craft, practiced by calm and detached doctors, this gripping, brutally honest account will make you think again. With astonishing compassion and candor, Marsh reveals the fierce joy of operating, the profoundly moving triumphs, the harrowing disasters, the haunting regrets, and the moments of black humor that characterize a brain surgeon's life. Do No Harm provides unforgettable insight into the countless human dramas that take place in a busy modern hospital. Above all, it is a lesson in the need for hope when faced with life's most difficult decisions.

Behind Every Lie Head of Zeus Ltd

A string of murders. A killer in the shadows. Only one man who can stop them...Dr Lucas Page, astrophysicist, university professor and former FBI agent, is settling into life away from the heat of the action. He hopes the days putting his extraordinary skills to use hunting New York City's deadliest killers are behind him. Now, he looks forward to a quiet life raising his children and supporting his wife Erin's career as an esteemed surgeon. But when attending a medical gala with Erin, Page is surprised by the annual memorial video - so many doctors have died in the last year, in freak accidents or by suicide. Utilising his unique gift at recognising patterns that others can't see, Page knows something is very wrong behind these statistics. The deaths don't make sense unless the doctors are being targeted and murdered by a particularly clever killer. In spite of himself, Page can't help but dig deeper and is forced to call on his old friends at the FBI for assistance. As clues start to come to light, it becomes clear that Page has unearthed a deadly operation. But someone has been watching. And the pattern soon reveals that the next victim is likely to be... Erin herself. Fast-paced and action-packed, Do No Harm is an edge-of-your-seat thriller with memorable characters and gripping twists.

Hippocrates' Oath and Asclepius' Snake John Wiley & Sons

In an internationally best-selling book, a modern neurosurgeon offers a revealing look into his life and work.

Do No Harm Macmillan

In this straightforward, easily readable guide, Reverend Marie M. Fortune discusses the process of ethical decision-making in intimate relationships. Starting with the premise that "love does no harm," Fortune offers a set of guidelines that can assist people of all ages in making sexual choices. But before turning to the guidelines themselves, Love Does No Harm includes broad reflections on why sexual choices are difficult, what social and cultural forces make them more difficult than they might otherwise be, and how the individual can choose to express her or his sexuality in ways that are pleasurable, intimate, and sensitive to the needs and rights of others. Love Does No Harm makes no assumptions about individuals' age, sexual orientation, or the type of intimate relationship in which they are involved.

Do No Harm Lynne Rienner Publishers

At the outset of World War I - the "Great War" - Freud supported the Austro-Hungarian Empire for which his sons fought. But the cruel truths of that bloody conflict, wrought on the psyches as much as the bodies of the soldiers returning from the battlefield, caused him to rethink his stance and subsequently affected his theory: Psychoanalysis, a healing science, could tell us much about both the drive for war and the ways to undo the trauma that war inherently breeds, but its principles could just as easily serve the enemy's desires to inculcate its own brand of "truth." Even a century later, psychoanalysis can still be used as much for the justifications of warfare and propaganda as it is for the defiance of and resistance to those same things. But it is in the investigation of the motives and methods behind these uses that psychoanalysis proves its greatest strength. To wit, this edited collection presents published and unpublished material by analysts, writers, and activists who have worked at the front lines of psychic life and war from various stances. Set at a point of tension and contradiction, they illustrate the paradoxical relation of psychoanalysis as both a site of resistance and healing and a necessary aspect of warmaking, propaganda, and militarism. In doing so, we venture from the home front - from the trauma of returning veterans to the APA's own complicity in CIA "black sites" - across international borders - from the treatment of women in Latin American dictatorships to the resistance to occupation in Palestine, from mind control to an ethics of responsibility. Throughout, a psychoanalytic sensibility deconstructs the very opposition that it inhabits, and seeks to reestablish psychoanalysis as the healing discipline it was conceived to be.

To Do No Harm Touchpoint Press

Book 2 in the award-winning Medical Students series From busy hospitals in San Diego to the barren deserts of Arizona, this tension-filled thriller, the second installment of The Medical Students series, follows the life and death challenges, the surprising twists and turns, and the ethical dilemmas of two young doctors in their quest to rid the profession of bad doctors who practice bad medicine resulting in bad outcomes. Book One, Do No Harm, introduced Torrey Jamison and Matthew Preston. Torrey, with her genius IQ, gained acceptance to Stanford Medical School to pursue her dream of becoming a pediatric neurosurgeon in honor of her little sister, Leia, who died of brain cancer. At Stanford, she met her future husband, Matthew, who pursued medical school for the sole purpose of becoming a prison doctor in order to gain access to-and kill-his father's murderer who was incarcerated in San Quentin. As their relationship deepened, Torrey was forced to confront the potential value and moral ambiguity of vigilantism. In this page-turning, stand-alone suspense sequel, Bad Medicine, newlyweds Torrey and Matthew have graduated from medical school and are now new doctors at Kaiser hospital in San Diego. While there, they learn of a friend's young niece who has fallen victim to a doctor who is running a phony cancer treatment center. Putting their careers and marriage in jeopardy, Dr. Jamison and Dr. Preston agree to help their friend's family seek the ultimate revenge.

First Do No Harm Simon and Schuster

In *First Do No Harm*, David Gibbs raises basic questions about the humanitarian interventions that have played a key role in U.S. foreign policy for the past twenty years. Using a wide range of sources, including government documents, transcripts of international war crimes trials, and memoirs, Gibbs shows how these interventions often heightened violence and increased human suffering. The book focuses on the 1991-99 breakup of Yugoslavia, which helped forge the idea that the United States and its allies could stage humanitarian interventions that would end ethnic strife. It is widely believed that NATO bombing campaigns in Bosnia and Kosovo played a vital role in stopping Serb-directed aggression, and thus resolving the conflict. Gibbs challenges this view, offering an extended critique of Samantha Power's Pulitzer Prize-winning book, *A Problem from Hell: America in the Age of Genocide*. He shows that intervention contributed to the initial breakup of Yugoslavia, and then helped spread the violence and destruction. Gibbs also explains how the motives for U.S. intervention were rooted in its struggle for continued hegemony in Europe. *First Do No Harm* argues for a new, noninterventionist model for U.S. foreign policy, one that deploys nonmilitary methods for addressing ethnic violence.

Contemporary Bioethics Burns & Oates

Closing the Gap On Police Reform What if you could change your organizational culture to reduce or eliminate the use of excessive force, improve morale, and generate loyalty, service, and outstanding performance - all while creating greater community support of your department? You can. Former Police Chief Ramon Batista and Executive Coach Mark D Ziska have a proven 5-step solution that works to change the culture, performance, and character of any size department, agency, or small or large business. Using the proven process of a strategic plan with a well-defined launch strategy Batista and Ziska have shown that "retraining" the police isn't as powerful as changing the culture, hiring for character, and following a well-defined plan that recognizes, celebrates, and rewards character, values, and performance. They also explain why well-defined performance standards, organizational values that are lived, not parroted, and hiring men and women who show a "heart of service," for their community is critical to every police department, law enforcement agency, or large or small business. Ramon Batista holds a Bachelor of Science degree in Public Safety and Homeland Security and a Master of Science degree in Leadership from Grand Canyon University. The former Police Chief for Mesa, AZ PD, has participated in the Police Executive Leadership Institute, PERF; Senior Management Institute for Police Federal Bureau of Investigation National Academy and many other organizations. Mark D Ziska is currently the Chair of the Arizona State Personnel Board as the human resource industry representative to the five member state board. He's also the former Senior Director (VP) of Human Resources for Raytheon-leader of the world's leading developer and manufacture of advanced missile and directed energy systems. Get this book today and start improving your leadership tomorrow.

Do No Harm Ashgate Publishing, Ltd.

Medical mistakes are more pervasive than we think. How can we improve outcomes? An acclaimed MD's rich stories and research explore patient safety. Patients enter the medical system with faith

that they will receive the best care possible, so when things go wrong, it's a profound and painful breach. Medical science has made enormous strides in decreasing mortality and suffering, but there's no doubt that treatment can also cause harm, a significant portion of which is preventable. In *When We Do Harm*, practicing physician and acclaimed author Danielle Ofri places the issues of medical error and patient safety front and center in our national healthcare conversation. Drawing on current research, professional experience, and extensive interviews with nurses, physicians, administrators, researchers, patients, and families, Dr. Ofri explores the diagnostic, systemic, and cognitive causes of medical error. She advocates for strategic use of concrete safety interventions such as checklists and improvements to the electronic medical record, but focuses on the full-scale cultural and cognitive shifts required to make a meaningful dent in medical error. Woven throughout the book are the powerfully human stories that Dr. Ofri is renowned for. The errors she dissects range from the hardly noticeable missteps to the harrowing medical cataclysms. While our healthcare system is—and always will be—imperfect, Dr. Ofri argues that it is possible to minimize preventable harms, and that this should be the galvanizing issue of current medical discourse.

5 Steps to Align Police Actions with Community Values Yale University Press

Would you allow a stranger to die so that you could live? Do you think he would make the same choice in your place? The study of medicine is a mixture of science and magic, where the most brilliant among us learn everything they can about the human mind. The wisest realize that there is far more mystery than we can begin to unravel. But that doesn't stop first-year intern Dr. Afelis from opening doors that lead to impossible truths. Doors that should have stayed closed. But Dr. Afelis is too afraid of herself to leave the past alone, and soon the boundaries between medical miracles and the truly supernatural disappear completely. She is unable to resist the answers to her past that lay just behind forbidden doorways. Would you open them? Read this award-winning story and find out for yourself.

The Rights Turn in Conservative Christian Politics Oxford University Press

In *Ethics for Evaluation* the diverse perspectives on ethical guidance in evaluation are untangled and ordered in a theoretical framework focusing on evaluations doing no harm, tackling bad and doing good. Divided into four parts a diverse group of subject experts present a practical look at ethics, utilizing practical experience to analyze how ethics have been applied in evaluations and how new approaches can shape the future of ethics. The chapters collectively create a common understanding of the potential role of ethics to infuse policy decisions and stakeholder initiatives with evaluations that provide better insight and potential solutions for problems, going beyond "what works" to what needs to be done and what would help. The methodological scope ranges from working in contexts of fragility, conflict and violence, to participatory and decolonized approaches, including the ethical imperatives posed by global crises such as climate change, inequity and exploitative international relations. *Ethics for Evaluation* presents evaluators, commissioners of evaluation, policymakers and practitioners with inspiration for an ethical perspective on how evaluation can contribute towards solving problems. It presents a solid foundation for inclusive terminology and ethics guidance that would be the heart of a global exercise in professionalization of ethical evaluation practice.

Stories of Life, Death, and Brain Surgery UBC Press

With this important resource, health care leaders from the board room to the point-of-care can learn how to apply the science of safe and best practices from industry to healthcare by changing leadership practices, models of service delivery, and methods of communication.
