Each year car manufacturers release new production models that are unique and innovative. These cars begin as concepts then go through the process of prototyping. The process of creating a new model can take years, involving extensive testing and refining of aerodynamics, safety, engine components, and vehicle styling. The production model is the result of this lengthy process, and its new technologies reflect the latest engineering standards as well as market trends. The 2014 Passenger Car Yearbook details the key engineering developments in the passenger vehicle industry of the year. Each new car model is profiled in its own chapter with one or more articles that were previously published and written by the award-winning editors of Automotive Engineering International. The novel engineering aspects of each new model are explored in depth. Interviews with key developers and engineers are included for some of the models, providing inside details about how initial ideas evolved in the cars that consumers drive. Published for enthusiasts who are interested in new car models and their technologies, as well as practicing automotive engineers who are interested in new engineering trends such as hybrid systems, powertrain designs, automotive design, lightweighting, and materials, and new engineers who want an overview of current trends, the 2014 Passenger Car Yearbook also: • Provides a single source for information on the key engineering trends of one year. • Allows the reader to skip to

chapters that cover specific car models that interest them, or read about all models from beginning to end. • Makes for dynamic reading, with its large number of big, full-color images and easy-reading magazine format.

Beyond use in the consumer markets, detergents affect applications ranging from automotive lubricants to remediation techniques for oil spills and other environmental contaminants, paper and textile processing, and the formulation of paints, inks, and colorants. Faced with many challenges and choices, formulators must choose the composition of detergents carefully. The fourth and latest installment of the Handbook of Detergents, Part D: Formulation enables formulators to meet the demands of the increasing complexity of formulations, economic and sustainability constraints, and reducing the impact of detergents on the environment to which they will eventually be released. Volume III extends this handbook series to cover new developments and topics in tribology that have occurred during the past decade. It includes in-depth discussions on revolutionary magnetic bearings used in demanding applications in

compressors, high-speed spindles, and aerospace equipment. Extensive coverage is given to tribology developments in office machines and in magnetic storage systems for computers. Monitoring sensors are addressed in the first chapter, followed by chapters on specific monitoring techniques for automobiles, diesels, and rotating machines. One chapter is devoted to procedures used for tracking the remaining life of lubricants. Synthetic lubricants are discussed by outstanding specialists in this rapidly developing field. Synthetics are increasingly important in widely diverse areas, including compressors using the new ozone-layer-friendly refrigerants and a variety of extreme-temperature and environmentally-sensitive applications. Water- and gas-lubricated bearings are given similar attention. The contributors also develop a new, unified coverage for fatigue life of ball and roller bearings; for design and application of porous metal bearings; for self-contained lubrication, involving oil rings, disks, and wicks; and for plastic bearings. Each of these classes of bearings are used by the millions daily throughout industry. The three-volume handbook is an essential reference to tribologists and lubrication, mechanical, and automotive engineers. It is invaluable to lubricant suppliers; bearing companies; those working in the aerospace industry; and anyone concerned with machine design, machinery wear, and maintenance.

This report should be of interest to transit bus maintenance managers and others interested in the development of written transit bus maintenance procedures, or "practices," and the sharing of these practices with others in the transit industry. The report provides guidance on how to develop effective transit bus maintenance practices tailored to one's local operating environment. It provides seven sample practices developed using the guidance. Complementing this report is an on-line Web Board sponsored by the Transportation Research Board's Committee on Transit Fleet Maintenance. This Web Board allows transit agencies to post their maintenance practices for others to review, revise as necessary for their own operating conditions, and use. The report provides instructions on how to access the Web Board, use it to

develop maintenance practices, and share these practices among transit agencies.

Highway Safety Literature Springer Science & Business Media This book had its start when Douglas A. Sloan and the late Ralph Davies first decided to share our firm's experience in mine management consulting assignments by using this experience as the basis for a mine management and productivity course. Over the years with more and more assignments, the course text notes were continuously updated and improved. However, the notes only reached the relatively few persons in the mining industry who attended each year's courses. The purpose of this book is to make this experience and knowledge available to everyone who has an interest in systematic mine management. The book is based on nearly 500 mine management consulting assignments which over the years were carried out by too many consultants to begin to mention names. However, some of the international experts whose work was used or who directly contributed must be mentioned. First would be Col. I. F. Urwick whose books, articles and personal guidance of the author have had a general influence on the whole book and a specific influence on the Organization chapter. Others are John Humble whose work in developing Management by Objectives (MBO) is reflected in that chapter and Patrick H. Irwin for his work in Corporate Planning, which he has written of in that chapter.
