Induction Motor Winding Design Software An induction motor or
asynchronous motor is an AC electric motor in which the electric

current in the rotor needed to produce torque is obtained by electromagnetic induction from the magnetic field of the stator winding. An induction motor can therefore be made without electrical connections to the rotor. An induction motor's rotor can be either wound type or squirrel-cage type. Induction motor - Wikipedia We start the squirrel cage motor mostly with star-delta stator and hence the stator of squirrel cage motor is delta connected. We start the slip ring three-phase induction motor by inserting resistances so, the stator winding of slip ring induction motor can be connected either in star or delta. The winding wound on the stator of three phase induction motor is also called field winding, and when this winding is excited by three phase ac supply, it produces a rotating magnetic field. Construction of Three Phase Induction Motor | Electrical4U Induction Motor Design The induction motor presumed familiar up-to-date form among 1888 and 1895. During this time interval, 2 and 3 phase energy sources (supplies) were invented to generate a revolving magnetic field in the motor.
