The King Takes a Bride John Murray
The European DayWater project has developed a prototype of an Adaptive Decision Support System (ADSS) related to urban stormwater pollution source control. The DayWater ADSS greatly facilitates decision-making for stormwater source control, which is currently impeded by the large number

of stakeholders involved and by the necessary multidisciplinary knowledge. This book presents the results of this project, providing new insights into both technical and management issues. The main objectives of its technical chapters are pollution source control modelling, risk and impact assessment, and evaluation and comparison of best management practices. It also covers management aspects, such as the analysis of the decision-making processes in stormwater source control,

at a European scale, and stormwater management strategies in general. The combination of scientific-technical and socio-managerial knowledge, with the strong cooperation of numerous end-users, reflects the innovative character of this book which includes actual applications of the ADSS prototype in significant case studies. DayWater: an Adaptive Decision Support System for Urban Stormwater Management contains 26 chapters collectively prepared by DayWater scientific partners and end-users associated with this European Research and Development project. It includes: A general presentation of the DayWater Adaptive Decision Support System (ADSS) structure and operation modes A detailed description of the major components of this ADSS

prototype The assessment of its components in significant case studies in France, Germany and Sweden The proceedings of the International Conference on Decision Support Systems for Integrated Urban Water Management, held in Paris on 3-4 November 2005. The book presents the ADSS prototype including a combination of freely accessible on-line databases, guidance documents, “road maps” and modelling or multi-criteria analysis tools. As demonstrated in several significant case studies the challenge for stormwater managers is to make the benefits of urban stormwater management visible to society, resulting in active co-operation of a diversity of stakeholders. Only then, will sustainable management succeed. DayWater: an

Adaptive Decision Support System for Urban Stormwater Management advances this cause of sustainable urban management through Urban stormwater management, and makes achievable (by means of risk and vulnerability tools which are included) the goal of integrated urban water management (IUWM).

Born a dragon, masquerading as a man. It was a time known as the dark ages. Cursed from birth with the ability to take the shape of a human, Dreoteth walks among the citizens of Malmsbury as one of them. He learns to subdue his instinct to kill when he acquires something he's never had: a friend. Is this the dawn of enlightenment, or will dragons and

humans be drawn back into battles of blood and flame? Faced with an unexpected decision between his kind and men, Dreoteth makes a choice that changes his life forever. * * * This story revolves around emotional conflict and a lot of tension. I tried to take a different angle on what it would be like to exist as an ancient creature thrust into the world of man. There are witches, hints of magic and a few graphic battle scenes to round out the tale.

of the Realms and restore it to the Order. Gemma and her friends from Spence use magical power to transport themselves on visits from their corseted world of Victorian London (at the height of the Christmas season), to the visionary country of the Realms, with its strange beauty and menace. There they search for the lost Temple, the key to Gemma's mission, and comfort Pippa, their friend who has been left behind in the Realms. After these visits they bring back magical power for a short time to use in their own world. Meanwhile, Gemma is torn between her attraction to the exotic Kartik, the messenger from the opposing forces of the Rakshana, and the handsome but clueless Simon, a young man of good family who is courting her. In this book, Denis Serre begins by providing a clean and concise introduction to the basic theory of matrices. He then goes on to give many interesting applications of matrices to different aspects of mathematics and also other areas of science and engineering. With forty percent new material, this second edition is significantly different from the first edition. Newly added topics include: • Dunford decomposition, • tensor and exterior calculus, polynomial identities, • regularity of eigenvalues for complex matrices, • functional calculus and the Dunford-Taylor formula, • numerical range, • Weyl's and von Neumann's inequalities, and • Jacobi method with

random choice. The book mixes together algebra, analysis, complexity theory and numerical analysis. As such, this book will provide many scientists, not just mathematicians, with a useful and reliable reference. It is intended for advanced undergraduate and graduate students with either applied or theoretical goals. This book is based on a course given by the author at the École Normale Supérieure de Lyon.

David Obey has in his nearly forty years in the U.S. House of Representatives worked to bring economic and social justice to America's working families. In 2007 he assumed the chair of the Appropriations Committee and is positioned to pursue his priority

concerns for affordable health care, education, environmental protection, and a foreign policy consistent with American democratic ideals. Here, in his autobiography, Obey looks back on his journey in politics beginning with his early years in the Wisconsin Legislature, when Wisconsin moved through eras of shifting balance between Republicans and Democrats. On a national level Obey traces, as few others have done, the dramatic changes in the workings of the U.S. Congress since his first election to the House in 1969. He discusses his own central role in the evolution of Congress and ethics reforms and his view of the recent Bush presidency—crucial chapters in our democracy, of interest to all who observe politics and modern U.S. history. For much of the last half of the twentieth century, W. G. Lambert devoted much of his research energy and effort to the study of Babylonian texts dealing with Mesopotamian ideas regarding creation, including especially Enuma Elish. This volume, which appears almost exactly 2

years after Lambert's death, distills a lifetime of learning by the world's foremost expert on these texts. Lambert provides a full transliteration and translation of the 7 tablets of Enuma Elish, based on the known exemplars, as well as coverage of a number of other texts that bear on, or are thought to bear on, Mesopotamian notions of the origin of the world, mankind, and the gods. New editions of seventeen additional "creation tales" are provided, including "Enmesharra's Defeat," "Enki and Ninmah," "The Slaying of Labbu," and "The Theogony of Dunnu." Lambert pays special attention, of course, to the connection of the main epic, Enuma Elish, with the rise and place of Marduk in the Babylonian pantheon. He traces the development of this deity's origin

and rise to prominence and elaborates the relationship of this text, and the others discussed, to the religious and political climate Babylonia. The volume includes 70 plates (primarily hand-copies of the various exemplars of Enuma Elish) and extensive indexes.

Gyðinga saga Simon and Schuster
In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other

circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory

rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type

of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.
