This essay is about the management of natural and environmental resources in cross-border areas. It explores a group of geographical, political, legal, economic and cultural factors that arise when political units (such as sovereign countries, dependent states and other administrative units) seek to utilize natural and environmental resources efficiently and equitably while minimizing the resultant damages (for example, prevention of resource degradation and preservation of the physical environment). \* Examines various types of cross-border areas at both international and sub-national levels throughout the world as well as their geographical, political, economic and cultural influences on the cross-border resource management \* Uses the latest international and area data, resulting in new findings for cross-border environmental activities \* Contains a large number of case studies throughout the world including four in-depth case studies of cross-border resource management  
*The Long Game* IGI Global

This book presents a new approach to management in an increasingly interactive world. In this context, the use of the word "new" has two meanings. The first relates to a new definition of borders (which are natural, institutional, functional, or mixed); the second concerns the fact that the book applies (and, where necessary, develops) analytical tools, methods and models that are different from those used in other similar books. The objectives of this book are: to clarify whether existing management theories and methods can be effectively applied in an entity (which can be defined as a sovereign country, a region, a community, a culture, or a firm) as the latter increasingly interacts with the rest of the world; to develop qualitative and quantitative methods to help leaders make optimal decisions for their entity and, at the same time, to maximize the positive (or minimize the negative) effects of those decisions on the rest of the world; and to design workable cross-border cooperation plans and conflict-management schemes that allow policy-makers to better cope with the challenges and problems posed by our increasingly interactive world.

#### Fifty-Four-Forty Or Fight Elsevier

This monograph analyses the role of border cities in promoting territorial development processes in border regions across the world. It not only embraces the scientific fields of regional and urban studies but also addresses territorial (urban, local, regional) development and planning theories, as well as the effects of development policies applied to border regions in both Europe and North America. In essence, the book offers a full toolkit of border regions' territorial development knowledge and, in particular, advances a range of policy development proposals. It provides a comprehensive introduction to contemporary thinking about how border cities can play a decisive role in boosting territorial development processes in border regions. The book is divided into three parts. Part I presents a theoretical framework on the role of border cities in promoting territorial development and planning in border regions. Part II debates current mainstream policies focusing on supporting border regions and specifically border cities in the EU, the UK, and North America. Finally, Part III presents a wealth of updated knowledge, based on the analysis of several concrete case studies: border cities from both Europe (north, south, east and west) and North America (Canada, the United States, and Mexico). The chapters are written by some of the most renowned authors on the subject, including scholars from several European and North American countries, as well as the secretary generals of three European border regions associations (AEBR, MOT, and CESC). The book will thoroughly prepare students and provide knowledge to academics and policymakers in the fields of urban and regional planning and development studies, human geography, economic development, EU policies, border regions, and policy impacts.

The blue economy is a widely used concept in policy circles; however, people across a wide spectrum have a peripheral understanding of the phenomenon. At the moment, there are several

conflicting understandings of the blue economy but no universally accepted definition and veritable measures. Considering the existential importance of the blue economy for the protection of marine environments and sustainability of businesses, there is an urgent need for rigorous conceptual, policy-focused, theoretical, and empirical studies on the subject from multidisciplinary perspectives. Implications for Entrepreneurship and Enterprise Development in the Blue Economy enriches existing definitions of a blue economy with inputs from a multidisciplinary lens and provides veritable measures for evaluating blue economy progression and compliance. Covering topics such as economics, natural resource development, social equity, and sustainability, this reference work is ideal for policymakers, entrepreneurs, managers, oceanographers, marine biologists, scholars, industry professionals, government officials, academicians, researchers, practitioners, instructors, and students.

By analysing the experience of Finland, Risto Alapuro shows how upheavals in powerful countries shape the internal politics of smaller countries. This linkage, a highly topical subject in the twenty-first century world, is concretely studied by putting the abortive Finnish revolution of 1917-18 into a long historical and a broad comparative perspective.

For more than a century, no US adversary or coalition of adversaries - not Nazi Germany, Imperial Japan, or the Soviet Union - has ever reached sixty percent of US GDP. China is the sole exception, and it is fast emerging into a global superpower that could rival, if not eclipse, the United States. What does China want, does it have a grand strategy to achieve it, and what should the United States do about it? In *The Long Game*, Rush Doshi draws from a rich base of Chinese primary sources, including decades worth of party documents, leaked materials, memoirs by party leaders, and a careful analysis of China's conduct to provide a history of China's grand strategy since the end of the Cold War. Taking readers behind the Party's closed doors, he uncovers Beijing's long, methodical game to displace America from its hegemonic position in both the East Asia regional and global orders through three sequential "strategies of displacement." Beginning in the 1980s, China focused for two decades on "hiding capabilities and biding time." After the 2008 Global Financial Crisis, it became more assertive regionally, following a policy of "actively accomplishing something." Finally, in the aftermath populist elections of 2016, China shifted to an even more aggressive strategy for undermining US hegemony, adopting the phrase "great changes unseen in century." After charting how China's long game has evolved, Doshi offers a comprehensive yet asymmetric plan for an effective US response. Ironically, his proposed approach takes a page from Beijing's own strategic playbook to undermine China's ambitions and strengthen American order without competing dollar-for-dollar, ship-for-ship, or loan-for-loan.

The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.

The South China Sea, where a number of great powers and regional players contend for influence, has emerged as one of the most potentially explosive regions in the world today. What can be done to reduce the possibility of conflict, solve the outstanding territorial problems, and harness the potential of the sea to promote regional development, environmental sustainability and security? This book, with contributions from leading authorities in China, the Philippines, Vietnam, Australia,

Singapore and the United States, seeks to illuminate these questions.

The study of territorial politics has enjoyed a renaissance in the last thirty years. Scholars have questioned the state-centric assumptions upon which mainstream social science has been built, pointing to the territorial (re)distribution of power across and within states. This Handbook brings together leading scholars to demonstrate how territory has shaped institutional structures, public policies, elections, political parties, and identity across the world. Offering theoretical, comparative and empirical insights, this book provides a comprehensive overview of the impact of territory on modern political, economic and social life.

*Theory and Practice* Routledge

This book emanates from an interdisciplinary dialogue conducted among researchers from nine countries and two continents, Europe and America. There is a strong international dimension to spatial planning. European integration strengthens interconnections, development and decision-making across national and regional borders. EU policies in areas such as environment, transport, agriculture or regional policy have far-reaching effects on spatial development patterns and planning procedures. Planners in the EU are now routinely engaged in cooperation across national borders to share and devise effective ways of intervening in the way our cities, towns and rural areas develop. In short, the EU has become an important framework for planning practice, research and teaching. Spatial planning in Europe is being 'Europeanized', with corresponding changes for the role of planners. Written for students, academics, practitioners and researchers of spatial planning and related disciplines, this book is essential reading for everybody interested in engaging with the European dimension of spatial planning and territorial governance. It explores: spatial development trends and their influence on planning the nature, institutions and actors of the European Union from a planning perspective the history of spatial planning at the transnational scale the planning tools, perspectives, visions and programmes supporting European cooperation on spatial planning the territorial impacts of the Community's sector policies the outcomes of European spatial planning in practice.

*Resilience and Regional Dynamics* Routledge

Using empirical evidence, this book argues for a more comprehensive view of the diversity of local resources and well-being from a territorial perspective. The first part of the book addresses the contrasting nature of local resources: in connection with proximity and governance, the ground, the past, cultural heritage sites, the snow, and energy. Well-being from multiple perspectives is examined in the second part, shedding light on sociabilities vs. income level, accessibility for pedestrians, health via urban design, life course trajectories as indicators of quality of life, and the connection between amenities and social justice.

During the early 2000s the market liberalization reforms to the Russian economy, begun in the 1990s, were consolidated. But since the mid 2000s economic policy has moved into a new phase, characterized by more state intervention with less efficiency and more structural problems. Corruption, weak competitiveness, heavy dependency on energy exports, an unbalanced labour market, and unequal regional development are trends that have arisen and which, this book argues, will worsen unless the government changes direction. The book provides an in-depth analysis of the current Russian economic system, highlighting especially structural and institutional defects, and areas where political considerations are causing distortions, and puts forward proposals on how the present situation could be remedied.

**Strategies for Shaping Territorial Competitiveness** Edward Elgar Publishing

This book examines some of the evolving challenges faced by EU regional policy in light of enlargement and to assess some of the approaches and trends in terms of territorial development policy and practice that are emerging out of this process. Focusing on the experiences on Central and Eastern Europe, these chapters reflect on the diversity of approaches to spatial planning and the the politics of policy formation and multi-level governance operations - from local to trans-national agendas. Promoting increased awareness and understanding of these issues is the main purpose of the book, as well as harnessing the extensive capacity and 'knowledge' within these countries that can greatly enrich the discourse within an enlarged 'epistemic community' of European spatial planning academics, practitioners and policy-makers. The recently acquired CEE dimension provides a unique opportunity to examine the evolution of existing 'epistemic communities' as well as to explore the potential emergence of new ones..
